## Part of MONMOUTH. (Mr. G. C. SMITH's District.)

No. of Lot.	Area.	Class.	Descrip-		rying acity.	Annual and Sale Value.	Lessee.	Remarks.
§ 253 { 292	Acres. 500	3rd	P. & A.	Sheep.	Cattle.	£ s. 7 10 per annum 0 5 per acre	Vacant John Abel	About one-fifth could be improved by ringing and burning off. Patches of good soil here and there, but, as a whole, poor and rocky. Should
22	500	3rd	<b>A.</b> :	50	••	5 0 per annum 0 5 per acre	S. Griffiths	of value for the timber only. Small patches of agricultural interspersed; heavily timbered;
147	:1000	3rd	Ρ.	300	••	15 0 per annum 0 10 per acre	Honora Bacon	very steep and rocky. Bush track to the lot.  This block would be much improved by ringing the trees, and small patches at the back could
				· ·				be cultivated. Its situation so near the River Derwent would give it a higher value for the timber, but there is no recognised road.
855 155 156	121 800 500	3rd	P	200		10 0 per annum 0 5 per acre	Vacant H. Brock H. Brock	This block is very scrubby and heavily timbered; could be improved to some extent in parts by ringing and burning. Some small portions could be cultivated. Should be sold as com-
<b>157</b>	750	3rd	<b>P.</b>	100.	••	3 15 per annum 0 5 per acre	Charles Mann	bined from their position to surrounding land. A road runs to this lot; sound bush road. A very worthless block heavily timbered; soil, sand, and sand shale; stringy bark trees and native hop scrub. A road runs to this lot
{ 12 13	835 850	3rd	<b>P.</b>	300	••	15 0 per annum 0 5 per acre	J. P. Sherwin Vacant	from the Broadmarsh.  This is a poor block, broken sandstone ridges, poor soil covered with ferns; not worth improving. Should be combined for sale or lease from their position. A bush road runs
208	650	3rd	<b>P.</b>	¦150	••	5 10 per annum 0 5 per acre	R. T. Allwright	to these lots.  This lot poor sandy soil. Stringy-bark timber, and very much covered with ferns. The road to Broadmarsh bounds this lot on the south. Surrounded by purchased land, and therefore
198 unnum- bered lot north of	700 1200 500	3rd	P	300	••	15 0 per annum 0 5 per acre	C. Mann John Espie Vacant	should be sold.  The greater portion of this block bad, and heavily timbered; sandy soil covered with ferns chiefly. A road from Hamilton to the Broadmarsh bounds this block on the south.
the above $\begin{cases} 213 \\ 73 \\ 94 \\ 289 \end{cases}$	500 2570	3rd	P	500		25 0 per annum 0 5 per acre	P. M'Carthy Vacant	Three-fourths of this block very bad; stringy bark; sour sandy land; steep hills and sand rocks; coarse herbage; a small portion capable
and part of Lot 45	400		•• (	••	٠٠ ,	••	R. T. Allwright	of improvement; chief value its timber. A bush road to this block.
$ \left\{ \begin{array}{c} 61 \\ 62 \end{array}\right\} $ 785	1500	2nd	<b>P.</b>	500		25 0 per annum 0 10 per acre	{	The greater portion of this block very heavily timbered and scrubby: part very rocky and
, ,			* * ,	•• ;	••	·••	Vacant	stony; one half could be greatly improved by ringing and burning off. No recognised road. The lots should be combined from their relative
$ \begin{bmatrix} 87 \\ 151 \end{bmatrix} $	2500	2nd	Р.	1000	••	50 0 per annum .0 10 per acre	A. M'Dowall	This is a block of land which could be greatly improved by ringing and burning off. All
157 J (301	1600	i	. • •	••	••	• <b>.</b>	G. Chivers	heavily timbered, but generally well grassed. Soil good, and some portions could be cultivated to advantage. Should be combined from their position, and to be profitably worked as a pastoral block. A bush track to
\$6 80 153	1300 1319	2nd	Р.	700		35 0 per annum 0 10 per acre	R. M Dowall J. Ibbott	this block.  This block is fair second class pastoral. Lot 86 and 45 could be much improved by ringing and
153 (	500		••	••	••	••	A. M'Dowall	to lot 80, very stony. No recognised road, but one could be had through crown land.  These blocks should be combined from their
\frac{84}{part of}		3rd	Р.	100	••	5 0 per annum 0 5 per acre	John Baker	position and for profitable working.  This lot exceedingly bad, almost worthless for pastoral purposes: nine-tenths nothing but
Lot 85			••	••	••	••	A. M'Dowall, junr.	sand and sand shale, without a blade of grass.  Its value consists in the timber, by its proximity to the Township of Bothwell, and surrounding purchased land.
, <b>302</b> ·	500	2nd	A. & P.	150		7: 10 per annum 0: 10 per acre	W. Triffett	Much improved by ringing and burning off. Some portions could be cultivated with advantage. A good bush road.

# Part of MONMOUTH. (Mr. G. C. Smith's District.)

No. of Lot.	Area.	Class.	Descrip-		rying acity.	Annual and Sale Value.	Lessec.	Remarks.
44	Acres. 460	2nd	Р.	Sheep. 150	Cattle.	£ s. 7 10 per annum 0 10 per acre	Vacant	A very fair lot which could be much improved by ringing and burning off. Surrounded by
<b>{ 272 2</b> 50	3000	3rd	<b>A.</b>		••	••	•••	purchased land without a right of road. Range of country between Lots 272 and 250. S.E. side of the Dromedary range. This block and Lots 250 and 272 are of no value
					,	·		for grazing purposes. Small patches of from 10 to 50 acres of very rich soil could be selected for cultivation; perhaps one-fith of the whole, and much scattered. The land is heavily tim-
								bered; very hilly and rocky; bush tracks bad. A few blocks have been settled upon by parties engaged in procuring hop-poles, saw-
272	500	3rd	P. & A.	150	••	5 0 per annum 0 5 per acre	M. J. Bradshaw	ing, splitting, &c.  Some portions improved by ringing and burning off; parts heavily timbered, and, on the whole, very bad grazing land. A few patches of agricultural land could be picked out. A good
<b>2</b> 50	500	3rd	P. & A.	50		2 10 per annum 0 5 per acre	Vacant	bush track to this lot.  This block worthless for grazing purposes in its present state. Small patches here and there could be had for cultivation. A rough bush
{ 295 { 257	400 500	3rd	A. & P.	Nil.	Nil.	0 5 per acre	P. Flynn J. Millar	track to the lot.  This block worthless, as either pastoral or agricultural; only value being the timber and near water carriage.
$\begin{cases} 197 \\ 297 \\ 245 \end{cases}$	1000 3000 500	3rd	A. 	Nil.	Nil.	0 5 per acre	Vacant Charles Mann John Holmes	This block of land is utterly worthless for pas- toral purposes. There is a large quantity of similar character in the vicinity of the Bluff
. 171	1400	3rd	<b>A.</b>	Nil.	Nil.	0 5 per acre	Charles Mann	and the Dromedary Mount.  As a block worthless for pasture, the greater portion barren land. A few small patches here and there might be cultivated: its only value in the timber.
<b>7</b> 53	53	3rd	Р.	Nil.	Nil.	0 5 per acre	Vacant	in the timber. Surrounded by purchased land. The block of which it formed a portion should not have been cut up: soil very poor.
. <b>7</b> 61	183	3rd	Α.		••	0 5 per acre	Vacant	This lot surrounded by purchased without right of road. Of value for the timber; and small patches could be cultivated.
<b>74</b> 8	423	3rd	Р.	50	••	5 0 per annum 0 10 per acre	Thomas Shone	This lot worthless for pastoral purposes. Steep rocky gullies; very little herbage: covered with scrub and heavy timber. Of value only for the timber and situation on the River Der-
{ 112 } 143	1700	3rd	Р.	Nil.	Nil.	0 5 per acre	Vacant	went. This block is the most worthless of land, nothing but sand hills; steep and covered with sandstone shale. Its only value may be for the timber hereafter.
72 269	1000	3rd	P. & A.	100	••	5 0 per annum 0 5 per acre	Vacant	Worthless as pastoral land. Small patches of agricultural land could be got here and there.
95	1800	3rd	P	300	••	15 0 per annum 0 5 per acre	Vacant	Chief value for hop-poles and timber.  95, part of 26, and unnumbered lot between. Chief portion rocky upland, heavily timbered. Some portions would be improved by ringing
		٠ . ا		(	CUM	BERLAND.	<i>(Mr.</i> G. C. Sмітн	and burning off.
52 155 279 278	500 1500	3rd	P.	300	••	10 0 per annum 0 5 per acre	Vacant	Unnumbered lot adjoining Lot 52.  The unnumbered lot fair second class; could be greatly improved by ringing and burning off; a part now rung. As a block, very stony and sandy. Some good cultivated land in small patches among the Dogwood scrub. No recog-
{ 193 } 53	1150 400	2nd	Р.	500	••	22 10 per annum 0 10 per acre	E. Nicholas H. Nicholas	nised road through, but one can be had readily.  This block heavily timbered, very hilly, and much scrub. Could be much improved by ringing and burning off. A good bush road

## Part of CUMBERLAND. (Mr. G. C. Smith's District.)

			<del></del>			· .		·
No. of Lot.	Area.	Class.	Descrip- tion.		rying acity.	Annual and Sale Value.	Lessee.	Remarks.
\begin{cases} 80 \\ 104 \\ 107 \end{cases}	Acres. 500 640 700	3rd	P	Sheep. 400		£ s. 20 0 per annum 0 5 per acre	D. M'Ra ditto Vacant	This lot very rocky and broken with steep gullies.  Could be improved by ringing and burning off.  No road to this lot.
§ 162 § 114	1349 429	3rd	Р.	400	••	20 0 per annum 0 10 per acre	Edward Nicholas G. Chivers	A good third class block. About one-third of this block could be much improved by ringing and burning off. Good sound land well grassed. The remainder very stony and heavily timbered. Very scrubby and steep
113	3223	lst	P.	1500		75 O per annum O 15 per acre	John Brown	hills. A good bush road to this block.  A very good block of pastoral land, and could be much improved by ringing and burning off.  Sound land, and generally well grassed. A road runs through this lot.
$\begin{cases} 115 \\ 161 \\ 54 \end{cases}$	900 1830	3rd	Р.	300		15 0 per annum 5 0 per acre	G. Nicholas A. Reid	This block is almost worthless for pastoral purposes. Poor sandy soil and very stony; chiefly covered with fern scrub and fallen timber. Its only value is in the timber for sawing and splitting, and its position to purchased land.
58 2 186 253	547 250 2000	lst	P	1500	200	75 O per annum O 20 per acre	Vacant ditto ditto	Part of Lot 2 north of road, and unnumbered land adjoining, up to Lots 186 and 253.  The Marlborough Road bounds this land on the south. This block, combined as stated, would make a first class station. From 800 acres to 1000 of fine marsh. Good soil, and the high land is good pasture soil although rocky. The improvements required being drainage, ringing, and burning off. It is now abandoned in consequence of the marsh land causing the
\$\begin{pmatrix} 2028 \\ 2027A \\ 305 \end{pmatrix}\$	4500	2nd	P.	1000	100	37 10 per annum 0 5 per acre	<b>V</b> acant	Fluke disease. Cattle could be depastured with advantage in its present state. A number now grazing upon it. The value I have given the block is what I consider it worth if properly drained. See report on this country generally. Lots 2028. 2027A. 305. 234, and adjoining land from Newton's Marsh to the Dee River. Not numbered on plan.
234 269 259 253 186	4360	2nd	Р.	1000	100	37 10 per annum 0 10 per acre	Vacunt	A great portion of this block very rocky and heavily timbered. Marshes of small extent. Could be readily drained. Some portions much improved by ringing and burning off. A homestead could be formed and small lots taken into cultivation. The Marlborough Road joins this block on the north.  This block poor second class. Much broken with steep gullies. A few small marshes interspersed, but could very easily be drained, and some portions improved by ringing and burning off. The Marlborough Road joins this lot.
$\begin{cases} 318 \\ 261 \\ 271 \end{cases}$	2000	3rd	<b>P.</b>	200	••	5 0 per annum 0 5 per acre	Vacant	This lot is a bad third class, a very small proportion capable of improvement by ringing and burning off. Soil—sand and sandstone shale, chiefly covered with ferns. Chief value, the timber.
$\begin{cases} 255 \\ 254 \\ 70 \\ 215 \\ 301 \\ 9 \end{cases}$	6000	2nd	P.	2500	300	100 0 per annum 0 10 per acre	Vacant -	Lots 255. 254. 70, 215. 301 and 9B block, on the Nive, unnumbered, about 500 acres.  This block comprises the Big Marsh, partially drained, and Nive Marsh. The land surrounding the Marshes fairly grassed, and well sheltered. The land in the vicinity of the Nive River, poor and rocky generally. The whole should be combined from its position, and for profitable working.
$   \left\{     \begin{array}{c}       2022 \\       212 \\       39 \\       210 \\       69 \\       214     \end{array}   \right. $	640 4740	lst	P. ′	2500	200	125 0 per annum 0 15 per acre	Joseph Clark Vacant	This block comprises Brady's Marsh and other smaller patches of marsh land; all could be readily drained and made sound. A large proportion of the high land would be much improved by draining and burning off. The Marlborough Road passes through this block.

#### Part of CUMBERLAND. (Mr. G. C. Smith's District.)

No. of Lot.	Area.	Class.	Descrip- tion.		ying icity.	Anmual and Sale Välue.	Lessee.	Remarks.
<b>{ 490</b>	Acres. 500 350	2nd	Р.	Sheep. 250	Cattle.	£ s. 12 10 per annum 0 10 per acre	Vacant Ditto	Lot 490, unnumbered lot adjoining.  Would be much improved by ringing and burning off the second year after being rung. These lots should be combined, as the possession of one lot renders the other of very little value.  Lot 490 has been surveyed into fourteen (14)
§ 120 { 127	500 <b>640</b>	3rd	Р.	300	••	15 0 per annum 0 10 per acre	Vacant M. Fenton	small lots, four of which have been purchased in such a position as to decrease the value of the remainder, and evidently only to work out the timber. The lots left are utterly worthless for cultivation, and should be thrown into one pastoral block as stated.  These lots should be combined. The vacant lot is the best, but commanded by the party holding Lot 127, which runs out in quality at the back. Both lots could be much improved by ringing and burning off two years after the trees were rung. A bush track runs through
( 150 ( 151	638 640	2nd	P	350 ••	••	15 0 per annum 0 10 per acre	M. Fenton Ditto	the lots.  Lot 150 is a good second class block, and would be much enhanced in value by ringing the trees and burning off two years afterwards. From its position it should be combined with Lot 151, although of inferior quality.
20	688	3rd	Р.	70	••	1 15 per annum 0 5 per acre	M. Fenton, jun.	A most worthless lot; poor sandstone shale and gravel. A loss to put sheep upon such land, and of no value but what the timber may give.  The value I put upon the lot is high.
$ \begin{cases} 107 \\ 117 \\ 123 \\ 134 \end{cases} $	500 500 1000	3rd	P	300		15 0 per annum 0 5 per acre	J. R. Blyth Ditto Vacant	These blocks should be combined as the back lots are worthless without the others, although not much worse in quality. Would be greatly improved by ringing and burning off: carrying capacity doubled. A bush track runs
§ 95 { 129	1000 1000	3rd	A. & P.	300	••	12 0 per annum 0 5 per acre	Vacant J. F. Read	through these lots. Timber of value.  These lots are very heavily timbered: sparsely grassed. Some few lots could be had to cultivate, but principally of value for the timber and hop-poles.
§ 91 <b>§</b> 94	1000 1000	3rd	P	400	••	15 0 per annum 5 0 per acre	J. R. Blyth ditto	Could be improved by ringing and burning off.  A fair bush road runs through these lots.
$\begin{cases} 89\\ 125\\ 108\\ 141 \end{cases}$	1000 500 500 500	3rd	P	500  	••	18 15 per annum 0 5 per acre	Vacant W. S. Sharland Ditto Ditto	Some portion would be improved by ringing and burning off. The greater portion rough rocky land. Should be combined, as the old block will carry so small a number, and the 1000 acres vacant is evidently made use of, and is the best block.
35	500	3rd	P.	100		5 0 per annum 0 10 per acre	B. Dickson	A very poor lot; very rocky hills; soil sandy, covered with sandstone shale. A few acres might be got on the river bank fit for cultivation. Its position, on the Derwent, and timber, give it the value attached.
106	800	3rd	Р.	150		7 10 per annum 0 10 per acre	B. Dickson	A very poor lot. Rocky hills. Soil covered with sandstone shale. A few small patches excepted; not worth improvement. Position on the River Derwent and timber give it the value attached.
$\begin{cases} 49\\114\\111\\72\\113 \end{cases}$	2500	3rd	Р.	700		35 0 per annum 0 10 per acre	Vacant .	Lot 49, 114, 111, 72, and part of Lot (remainder) 113.  These lots make a good third class block; and to make the most of their capabilities as also their position to surrounding property should be combined. The whole would be much improved by ringing and burning off at the proper season. A sound bush track runs throughout.
$\begin{cases} 30 \\ 104 \\ 105 \end{cases}$	500 500 500	2nd	P	700		35 0 per annum 0 15 per acre	B. Dickson Ditto M. White	Two of these lots very good second class. The whole block would be much improved by ringing and burning off. From position and for profitable working, as a block, the lots should be combined as stated.
126	640	3rd	Р.	100		5 0 per annum 0 5 per acre	M. Fenton	A very bad lot, not worth improving. Chief value the timber.

#### REPORT ON No. 1 PLAN.

#### Part of LINCOLN. (Mr. G. C. SMITH's District.)

No. of Lot.	Area.	Class.	Descrip- tion.		rying acity.	Annual and Sale Value.	Lessee.	Remarks.
70	Acres. 2000	2nd	Р.	Sheep. 400	Cattle. 50	£ s. 30 0 per annum 0 10 per acre	W. Dean	This lot has a good deal of scrubby land upon it. Marshes not large, but requires drainage. Could be enlarged from unlocated land adjoin-
$\begin{cases} 100 \\ 121 \\ 120 \\ 186 \\ 89 \\ 102 \end{cases}$	4000	2nd	<b>P.</b>	700	100	50 0 per annum 0 10 per acre	J. Bryant	ing equally good in character.  These lots require much draining to make them sound. Soil good, and upland fair pasture, well sheltered, but rough and rocky. Should be combined, for pastoral profit and from situation. The road to the Lower Derwent touches this block.
$\begin{cases} 105 \\ 243 \\ 83 \end{cases}$	1000 2500	2nd	P.	. 600	100	45 0 per annum 0 10 per acre	M. Fenton Ditto	Chiefly wet marshy land, with coarse herbage. Uplands on these lots generally good, and affording capital shelter. Some of the marsh land on these lots very good soil, and could be made very valuable by drainage.
99	1000 734	2nd	Р.	500	••	18 15 per annum O 10 per acre	Vacant Ditto	Unnumbered lot east of Lot 99.  A few marshes with rough herbage; upland stony, but fair herbage. Would be much improved by draining, ringing, and burning off. The
$ \begin{cases} 93 \\ 108 \\ 167 \end{cases} $	2485 340	2nd	P.	700	Í00	50 0 per annum 0 15 per acre	Wm. Dean Vacant	road to Lake St. Clair passes through these lots.  A large extent of marsh land could be readily drained and doubled in value. The greater portion of the higher land well grassed and capable of improvement by ringing and burning off. The Marlborough road runs through this block. These blocks should be combined for lease or sale from their position and river
92	596	1st	P.	300	••	15 0 per annum 1 0 per acre	Henric Nicholas	frontage.  A good lot. Not much marsh land; what there is can be easily drained; timbered land well grassed. Surrounded by purchased land, which lowers the value very much from what I have valued it at. The Marlborough road runs through this block.

New Norfolk, 2nd January, 1869.

SIR.

HAVING completed the inspection of Mr. Surveyor Smith's Survey District—comprising parts of the Counties of Monmouth, Buckingham, Cumberland, and Lincoln—I have the honor to transmit herewith, for your information, the printed forms, filled up, showing my estimate of the several lots of land in detail, as also a coloured plan for reference.

I take this opportunity of submitting a few remarks upon the crown land of this District.

In those parts of the Counties of Monmouth and Buckingham inspected, third class land largely predominates over second class, and there is not one lot of first class pastoral. This portion of the District has been many years located, and the best lands have long since fallen into private hands.

The lands which I have placed as third class are very poor—thousands of acres absolutely worthless—although some lots are rented at a higher figure than they are normally worth, partly from the surrounding proprietors' fear of small holders coming in, because the lot or lots adjoin their freehold and are to some extent useful, or from the value given to the timber from its proximity to market. A few lots of second class are also so hemmed in by purchased land, and without a right of road, as to render them of little value to an outsider.

From these two classes of land, so situated, the revenue derives a very small annual return, and I beg to suggest the advisability of selling all such at a very low price. I am of opinion that a proportion could be placed at 5s. per acre, but the great bulk being intrinsically bad,—of value chiefly from the causes I have named,—they should be offered say at 2s. 6d. per acre: such lands never will bring in an annual revenue equal to 6 per cent. on that amount.

Agricultural land in this section of the District (part of Buckingham and Monmouth) is put down at 32,000 acres, but it would be a mistake to suppose that any large block of this area is, or ever will be available.

Situated on steep ranges and rocky tiers, agricultural patches are only to be had here and there; the soil generally, however, is good and well watered throughout—probably one-fifth (or 6000 acres) available for settlement, in blocks ranging from 10 to 30 acres.

This land, so situated and heavily timbered, I am of opinion should be offered for settlement upon the most liberal terms as an inducement to immigrants, simply on occupation and cultivation during a term of years, say seven or ten, at a peppercorn rent, with payment of survey fees upon application, and grant deed at the end of the term,—conditions of settlement, &c. having been duly carried out. From 300 to 400 homesteads might thus be laid out, say 10 acres to a married couple, increasing to 30 acres according to number of family.

If these lots were surveyed ready for the immigrants' occupation, they would at once be scattered over a large settled District much in want of good labour, and where they would find employment at seasons of the year when their own allotments did not require special attention.

These people would soon become a revenue-producing community, and otherwise many years must elapse before such lands would be taken up under the existing regulations, or by the natural demand from the present working population.

Cumberland and Lincoln.—Those portions of these Counties (popularly termed "The New Country") at present inspected are purely pastoral, having fair proportions of first, second, and third class lands unalienated, a considerable area of which, formerly leased from the crown, has been abandoned in consequence of the ravages of the Fluke disease. The crown rents for the year ending June 1868, being £291 10s., against £857 formerly received.

These lands form a fine pastoral country, which would be greatly enhanced in value by a proper system of drainage being set about. The country cannot be profitably occupied until effectually drained.

I have had some experience, and practical sheep-masters well know that there is no cure for the Fluke disease but to cure the land by draining. This done, there are extensive marshes of really fine land (public and private) capable of depasturing a sheep or more to the acre; and over a goodly extent, cultivation of oats, barley, and root crops, with laying down of clovers and English grasses, could be advantageously carried on.

I fear that at the present juncture no scheme, however liberal, as to tenure of lease, or with compensation added if the land should be required for sale, will induce the crown tenants to engage in carrying out a proper scheme of drainage: as a class they have not the means to do so.

It is not desirable, as a rule, that the crown should undertake such works; yet, as the proprietor of so fine an estate, under exceptional circumstances, (inability of landholders or crown lessees from want of means, &c.,) it might be well worth taking into consideration the propriety of, at least, initiating a good system of drainage by taking in hand a section of this country. I believe the example would do good and be followed up by others.

On my inspection of the "Dee Marshes," and marshes running from thence towards "Lake Echo" and the "Marlborough Tiers," I examined the mouth of the Dee River, or rather where the water of the marshes enters the river; from this point for about three miles upwards, through the marshes, the river water is nearly level with the top soil, and running very sluggishly; the slightest fresh in the river throws the water back over the low lands. If the snags (timber) were taken out for a mile down, and the bed of the river deepened as far as the Dee Bridge, a fall of some eight or ten feet would be gained and relieve the marshes materially. I believe this work could be carried out for a sum of £80 or £100, and would be the first step towards reclaiming a large extent of fine pastoral land. I merely give this as an example where the crown might, I think, step in and make a commencement; and I very respectfully submit that, if the Government can appropriate a sum for this purpose from any fund devoted to reproductive works, no more legitimate application could be made than this, and that it should be set about at once as the present time is the proper season of the year to carry on such works. If no steps can be taken now, a season will be lost, and the re-occupation of the country retarded.

A few attempts at drainage have been made, but, with the exception of Mr. Sharland's, very imperfectly carried out, almost worthless,—simply a main drain through the centre of a marsh without any system of catch draining, which is absolutely necessary in order to collect the water-flow at its source and *lead* it into the main drain.

The only method by which the Fluke disease can be overcome, and the lands under review improved, is by effectual drainage, ringing the trees where the land is good, and burning off two years after being rung.

I estimate the cost of drainage at from 3s. to 5s. per acre (i.e. a block of land, say 1000 acres, having one-fourth of marsh land, from 3s. to 5s. per acre on the whole, as the entire area would be made fit for profitable occupation), and for ringing and burning off from 1s. to 2s. per acre, but in most cases five shillings per acre would cover the cost of draining and ringing.

As this is merely a progress report, I defer further detail until a final report can be made of the crown lands in the several Survey Districts which I am instructed to inspect.

I have the honor to be, Sir,

Your very obedient Servant,

ROBERT CRAWFORD, Commissioner inspecting Crown Lands.

The Honorable the Colonial Treasurer, Hobart Town.

					<del></del>	,		
No. of Lot.	Area.	Class.	Descrip- tion.		rying acity.	Annual and Sale Value.	Lessee.	Remarks.
<b>178</b>	Acres. 1600	1st	Р.	Sheep. 800	Cattle. 150	£ 's. 115 0 per annum	J. & S. Austin	Fine rich marsh land principally. Requires draining effectually. Timber and upland, well
<b>C</b>	*** • •		••	••	••	0 20 per acre	Now H. Nicholas	grassed, with good shelter. A reserved road to these lots.
${ 164 \atop 1484 \atop 1483 }$	500 2255	lst	<b>P.</b>	1000	150	125 0 per annum 0 15 per acre	Vacant ditto	A fine block of land, greater portion sound feed- ing land. Marsh land, good, and easily drained. The lots are fenced. The Marlborough Road
{ 1481 { 185	800 1000	1st	Р.	500	200	125, 0 per annum 0 20 per acre	Matthews & Allwright ditto	bounds a portion of the block.  This makes a first class new country block of land. At a moderate outlay for draining the carrying capacity would be much increased.
								The marsh land is good, and the upland well grassed and good shelter. The Marlborough Road adjoin the lots; and fenced as combined.
<b>(176</b>	1000	3rd	A.	Nil.	Nil.	0 5 per acre	S. Griffiths	Unnumbered lot.
<b>3</b> 15	2000		••			::	Vacant ditto	These lots are in the Dee Scrub, and worthless in their present state for pastoral purposes. Land very heavily timbered throughout. Very rocky and dense scrub generally. Patches of good rich soil to be had in the gullies.
${311 \atop 302 \atop 308}$	500: 1000	3rd	P	300	::	7 10 per annum 5 0 per acre	Vacant W. R. Jamieson	These lots and the unnumbered lot adjoining very bad, only a few patches of grass land here and there. Generally very rocky and scrubby, with heavy timber. The Marlborough Road
(227)	1000	3rd	P.	300	100	32 10 per annum	Vacant	bounds this block. These lots heavily timbered. More suitable for
263	640						· ·	cattle than sheep at present.
$\left\{ \substack{241 \ 228} \right\}$	1000	!				0 5 per acre	W. Sibley	
(124	1000	3rd	P.	500		12 10 per annum	W. Sibley	These lots should be combined from position and
179 76	1013		::	::		0 5 per acre	H. Nicholas H. Nicholas	for water frontage. Very rocky country broken up by steep gullies. Portions to be improved
$\begin{cases} 316 \\ 180 \\ 125 \end{cases}$	1000 580 1000	2nd	P	500	200	118 15 perannum 0 10 per acre	Vacant — Sibley ditto	by ringing trees and burning off. These lots are fenced. Require improvement by draining, ringing of trees, and burning off. At present more suitable for cattle than sheep.
\$871 1 270 307 }	255 1572 1000	lst	P	1000	250	175 0 per annum 0 15 per acre	Vacant John Leatham Vacant	These lots, as combined, make up a fine block of pastoral land. Large proportion of rich marsh land, which could easily be drained and sown down with grasses. The upland, although rocky and scrubby in parts, also is good soil, and awaits improvement by ringing the trees and burning off. A moderate outlay would considerably increase the carrying capacity. The lots are fenced in as combined. The Marlborough Road bounds this lot on the north.
$\int_{27}^{242}$	1500	3rd	A.	Nil.	Nil.	0 5 per acre	Vacant	Lots 242. 27. 281A. and land between Lots 242 and 27.
281A 342 2 27 }	800						ditto	These lots comprise part of the Dee Scrub. A belt of heavily timbered land running parallel with the Dee River, on the east bank. Very rocky and broken with gullies. Patches of fine rich soil from 50 to 100 acres can be had in many parts of the block, but the cost of clearing would not, for many years, repay the outlay. The climate does not ripen wheat. All root crops, English grasses and oats, &c. flourish well, however, and would make first class dairy farms. Such blocks of land should be offered on condition of settlement and cultivation. The Marlborough Road is near those late.
$     \begin{cases}       219 \\       280 \\       281     \end{cases}     $ $     \begin{cases}       266 \\       272     \end{cases}   $	2500	3rd	Р.	300	••	7 10 per annum	Vacant	these lots.  These lots very bad in every way. Heavily timbered and in most places very scrubby. Soil sandy, covered with sandstone shale and ferns. A few acres of good soil here and there in the gullies, but as lots not worth occupation. The timber is the chief value they have, and may be utilised at a future time. A good bush road runs through these blocks.

Marshes capable of improvement by draining, and paring and burning a thin sod of the soil, and sowing English grasses. Good dairy farms could be established here.
\begin{cases} 155 \\ 148 \\ 386 \end{cases}	3000	3rd	Р.	 	100	25 0 per annum 2s. 6d. per acre-	Vacant	Lots 155. 148. 386. &c. Vicinity of Anson's Bay.  Along the coast line poor soil, sandy and quartz gravel; upland rocky, barren, and very scrubby; heavily timbered.
								The inspection of Mr. Surveyor Thomas's District ended at this point. The character of the country for several miles towards Cape Naturalist being very barren, and unoccupied for a very considerable area, I thought it advisable to defer the examination of the few lots on his boundary line, as they could be more readily taken up in the event of the adjoining District being gone over.—ROBERT CRAWFORD.

No. of Lot.	Area.	Class,	Descrip- tion.		ying acity.	Annual and Sale Value.	Lessee.	Remarks.
\$ 131 \$ 130	Acres. 1000	3rd	Р.	Sheep.	Cattle.	£ s. 8 0 per annum 0 2 6 per acre	Vacant	Chiefly rocky tier land, heavily timbered; part very scrubby: a few good feeding rises. Fenced in part.
§ 180A € 129	1500	3rd	Р.	. 300	••	15 0 per annum 0 2 6 per acre	Vacant	Lots 120a. 129. and about 500 acres north of Lot 130a. across the St. Paul's River. Steep rocky hills, but fairly grassed, with a small portion of good bottom land in Lot 129.
§ 195 § 304	1000	3rd	Р.	100	•	4 0 per annum 0 2 6 per acre	Vacant	Fenced in part. A rough rocky tier block, heavily timbered.
309	500	3rd	Р.	200	••	10 0 per annum 0 5 per acre	H. G. Brock	Quiet enjoyment block.  About 100 acres good grazing land; a small portion could be cultivated on the western boundary; remainder rocky tier land, principally,
							- · · · · · · · · · · · · · · · · · · ·	(Black Rock), scrubby, heavily timbered, with 500 or 1000 acres of the crown land adjoining the southern boundary; a fair second class agricultural and pastoral farm and homestead could be formed: fenced in part. A good bush road to Avoca.
\$364 \$120	2820	3rd	P.	500	50	32 10 per annum 0 5 per acre	Vacant	Lots 364. part 120. and say 1000 acres on west side to boundary of Lots 309. 687, and 688.  A large proportion rocky tier land, scrubby and coarse herbage, interspersed with patches of rough marsh land, very wet; would be improved in a few places by draining, and ringing of trees: fenced in part: casy access to the St. Paul's Road. There are seven lots marked off on Lot 120, not one of which is adapted for cultivation, or that can ever be so occupied.
§ 172 { 121	640	2nd	P.	100	50	17 10 per annum 0 10 per acre	Vacant	Chiefly marsh land, in parts heavily timbered, coarse herbage. The block is capable of improvement by draining, ringing, &c., and one-third could be cultivated. The St. Paul's Road from Avoca to Swansea passes through these lots. To be occupied to best advantage, part of Lot 290, Lot 341, and greater portion of the Town of Leipsic should be added. See Returns tor these lots.
	1350 500	3rd	P.	300	••	12 0 per annum 0 5 per acre	Vacant Ditto	Town of Leipsic, and land adjoining Lots 121 and 172.  The greater portion tier land, throughout rocky, heavily timbered, coarse herbage; somewhat better along the north-boundary, (by the St. Paul's Road). (A small reserve from 50 to 100 acres for police or postal purposes, should be marked off at this point, or a portion of Lot 290 adjoining Lot 12.) As a township not likely to be taken up.
Part of \$290 \$341	1000	3rd	Р.	200	••	8 0 per annum	Vacant 	Part of Lots 290, 341, and adjoining land. Chiefly tier land, rocky, with coarse herbage; fenced in part. The St. Paul's Road runs through these lots. Capable of improvement in part, by ringing. Two small lots east of Lot 341, (50 and 60 acres), not fit for cultiva- vation. Small portion wet coarse marsh, and
352 383 382 384 3238	10,483	3rđ	P	1500	50	72 10 per annum 2s. 6d. per acre	Nutt and Bedford Vacant, chiefly	surrounded by rocky tier land.  Lots 352, 383, 382, 384, 3238, and unnumbered lot.  Rocky tier land chiefly; parts heavily timbered; a few coarse wet marshes interspersed throughout which could be improved by draining, ringing, and burning off. Fenced and subdivided. Hut and yards. Access by rough bush road from Fingal. Although a large block, the configuration of the country and fencing require that the lots should be so com-

No. of Lot.	Area.	Class.	Descrip- tion.	Carr Capa		Annual and Sale Value.	Lessee.	Remarks.
588 589 590 191	Acres.	••	••	Sheep.	Cattle.	£ s.		From Lot 129 south towards Lot 382 north, and country eastward to the Douglas River, and small lots, 588, 589, 590, and 191.  This extensive area of country is almost entirely waste land. It is interspersed with miscalled marshes—(Major's, Duke's, and Thompson's,)—
								all of which are very wet, of no great extent, principally tea tree scrub, coarse herbage, and surrounded by barren tier land. The marshes would be improved by draining and burning off; but the soil is poor, and the climate bad. Their chief value is to run a moderate number of cattle in summer.
350	500	3rd	P.	100	••	4 0 per annum 2s. 6d. per acre	F. Groom	Lot 350 (adjoining Lot 310), and purchased lot, G. F. Groom.  A small portion of marsh land, chiefly rocky upland. Upland soil poor, covered with scrub and fern. A rough bush road.
$\begin{cases} 262 \\ 180 \\ 354 \end{cases}$	9351	3rd	Р.	200	••	8 0 per annum 2s. 6d. per acre	F. Groom	Chiefly poor sandy soil, and quartz gravel, parts heavily timbered. Fenced in part. A fair bush road. Some small patches fit for cultivation.
404 405	1000	3rd	Р.	••	<b>.</b> 50	12 10 per annum 2s. 6d. per acre	W. Binns	Part tier land, generally rock; poor soil and scrubby. Portions capable of improvement by ringing and burning off. Fenced in part.
138	1000	3rd	Р.	<b>2</b> 00	25	16 5 per annum 2s. 6d. per acre	M. Steel	A very rugged block, steep hills, and rocky; in parts fairly grassed. Fenced in. Good road from the St. Mary's Pass or the coast line.
378 } 398 } 367	1000 500	3rd	P	200	50	22 10 per annum 0 5 per acre	Hardy & Gallagher Vacant	Chiefly tier land, coarse wet marshes interspersed.  Small portions could be cultivated, and a considerable area much improved by ringing and burning off, and draining marshes. A good road from St. Mary's Pass.
$\begin{cases} 329 \\ 124 \\ 234 \\ 67 \\ 374 \end{cases}$	2450	2nd	P.	500	100	50 O per annum O 5 per acre	Still, Cameron, and Woodberry	Along the coast line good, she-oak hills, parts scrubby and heathy; back, steep hills; coarse herbage. Some portions capable of improvement by ringing and burning off. A fair bush road along the coast. Fenced and subdivided. A few patches for cultivation.
328 82 49	1500	3rd	<b>P.</b>	300	50	27 10 per annum 2s. 6d. per acre	Heaps and Wardlaw	A large proportion of scrubby heathy land, and part heavily timbered and thick scrub. Some parts would be much improved by ringing and burning off. A few patches could be cultivated. Fenced in and subdivided. A good bush road along the coast.
77	197	2nd	P.	100	••	5 0 per annum 0 10 per acre	R. V. Legge	Quiet enjoyment block. Sound upland; stony, but well grassed. Would be much improved by ringing and burning off. Fenced in.
<b>268</b>	400	3rd	P. & A.	100	20	10 0 per annum 0 5 per acre	T. Hutton	Quiet enjoyment block. Chiefly steep billy land, heavily timbered; part very scrubby and generally stony. Small portions could be cultivated, and a considerable proportion improved by ringing and burning off. Fenced in. A rough bush road from Cullenswood.
385	500	3rd	<b>P.</b>	100	20	10 0 per annum 0 5 per acre	J. Wardlaw	On the coast frontage, heathy and scrubby; sandy soil chiefly; but a considerable area would be much improved by draining, paring, and burning off the level land, and would produce English grass. Fenced in part. Back portion heavily timbered and rocky. A fair bush road.

SIR,

I have the honor to submit the following summary of, and observations upon, the Crown Lands-comprised in Six of the Survey Districts which your instructions, under date 19th November, 1868; directed me to inspect and classify;—"distinguishing pastoral from agricultural, the former to be divided into three classes, having reference to their carrying capacity;" "opinion as to the most advantageous manner of disposing of or dealing with those lands;" "probability of their being improved under long leases;" "as to draining, and whether in certain cases the timbered lands by ringing of trees, &c.;" "causes of abandonment, &c."

The country inspected comprises the Counties of Monmouth, Cumberland, and Somerset, part of Lincoln, and chief parts of Cornwall, Westmorland, Glamorgan, and Pembroke, being the Survey Districts in charge of Messrs. Smith, Sorell, lately Bennison, Hogan, Thomas, and Thompson.

This area of country may be divided—as it is popularly—into three distinct sections, the New Country, having Marlborough as a centre; the Lake Districts (table land bounded by the Great Western Mountain ranges on the north and east, with head waters of the Rivers Ouse and Clyde on the south and west); and the Low Lands, comprising chiefly those parts of the country which have been long settled upon, the lands remaining to the crown in this section being of the least value, the most valuable parts having passed into private hands.

I have made a careful inspection of these lands, and the classification gives a gross result of 89,137 acres of first class pastoral land, 420,484 acres of second class ditto, and 470,931 acres of third class ditto, with a carrying capacity of 233,574 sheep, and 12,860 cattle, &c.; annual grazing value of £13,368 10s. as against £4593 9s. 2d., the annual rent paid to the Crown from the same Districts as per returns to

This large discrepancy would lead to the supposition that I had over-estimated the capabilities of the crown lands; or that about two-thirds of the crown estate had been abandoned. I have been most careful not to note the carrying capacity higher than the present unimproved state of the lands warrants; and the annual value I have attached to each block is in accord with the present depressed state of the pastoral interests. I have also made distinction in estimating the yearly value as to class, giving first class a higher assessment per head of stock than second class, and third a lower still, for obvious reasons. A first class block of land, say 2000 acres, depastures 1000 sheep,—it may take from 5000 to 8000 acres of a third-class block to maintain the same number.

The expenses of fencing, shepherding, loss, &c., is much greater on the latter than the former; therefore, in fixing the rental, a lower poll assessment should be taken.

The estimate given on each class is below the current rates exacted for similar land by private individuals, instances of which I have given in a former report.

The loss of revenue arises from other causes. In the New Country a considerable area of land has been unoccupied for the past four or five years, in consequence of the fluke disease; but the crown lands have not to any great extent, or generally, been abandoned from this cause. Of the Lake Districts I have reported, in accord with my instructions, on 74,533 acres† being occupied from which no rent accrues to the crown. Similar appropriation, and in the same ratio, has been noted in the other districts inspected, not from improper occupation—at least, generally; but arising principally from the manner in which the lands are offered for lease or sale.

Bearing in view that the crown lands upon which I am now reporting are chiefly pastoral (the New Country, Lake Districts, Windfalls, Bogs, and greater part of the coast line purely so), which to occupy profitably should not have a less area in any one block than will depasture 500 sheep. In the two firstnamed sections not less than 1000.

The land as surveyed into lots from 500 acres up is not by any means adequate, and advantage is taken, to some extent, of this. By a judicious selection of two or three lots, other lots are so surrounded as to render them secure from being taken up by anyone else, and the whole block is fenced in; again, and principally of late years, from a very large area of crown lands having been withdrawn from leaseholders for sale, a large proportion of which cannot be quitted at even five shillings per acre.

So long as these lands are liable to be taken up no rent can fairly be demanded, although the original lessee still depastures his stock upon them.

From the sale of these lands having been for the past ten years pressed beyond the legitimate purchasing power of the Colonists,—forced in some measure to secure the land depastured upon, and taking advantage, as to area, of the manner in which they were offered for sale,—only such blocks were purchased as would prevent any outsider from gaining an entrance into the larger area, the balance-being still occupied, but no rent accruing to the Crown.

There was no healthy competition for the land, nearly all sold passing into the hands of the then lessee. Purchase, in the great majority of cases, materially hampered his working resources, and placed many in serious pecuniary difficulties from which they are now suffering; and is the chief cause of the unimproved state of private and crown lands; as when disease such as the Fluke sets in,—which improvement of the land can alone remedy,—he was destitute of the necessary means.

As bearing upon this enquiry, it may be well to endeavour to understand the effect of past legislation with reference to the crown lands. From 1858 to 1868 inclusive, the crown has sold of what is termed Agricultural land 259,693 acres; of Pastoral, 432,169 acres; value (in round numbers) £600,000, of which £500,000 has probably been paid, the balance being in course of payment as the instalments fall due. The transfer, in such a manner, of this land into private hands has not added one head (physical productive power) to the population of the Colony,—increased or added one cent. in value to the products raised from the soil.

On the contrary, a declension in all is given by the Statistical Returns.

During the years 1865 and 1866 there was sold of agricultural land 51,247 acres. Area under tillage (for the whole Colony) 1865, 106,305 acres, cereal crops. Two years later, when a large area of the above land might be supposed to be in profitable bearing, in addition to land previously held, if of the character described, and profitably occupied, 1867 Returns give only 98,454 acres in tillage (cereal crops); a decline of nearly 6000 acres in two years, although the crown had disposed of 50,000 acres during the same term. Nor does it appear, in the Districts I have traversed, that the remaining portion of the crown estate has been advantaged for further settlement by any expenditure of a portion of the sum so derived from sales of crown land.

"Roads, if any, their character and condition."—On this head I cannot report favourably. The main arteries, under the Great Lake Road Trust, leading into the Lake Districts are in good order. Those opening up the New Country from the Ouse River onwards are in a bad state of repair.

I failed to note in any of the Districts inspected legitimate expenditure of the funds placed at the disposal of the several Boards of Works. With trifling exceptions, the moneys have been expended upon the maintenance and repair of "old" roads under the control of the respective Road Trusts, to maintain and extend which a Special Rate is, or should be, levied. If the intention of the Legislature was to have new roads opened up—not only to give access to land purchased, from which the fund is derived,—but also to benefit the crown estate by extension of the means of communication into the interior from the main arteries, the operations of these Boards have entirely failed.

The greater portion of the land sold has been of the pastoral class, purchased in most cases by the original lessee, and for pastoral occupation the existing roads and bush tracks were sufficient, the rates levied under the Road Act being ample to meet pastoral requirements for many years to come.

In my opinion the grant can be withdrawn without disadvantage to the lease or sale of the pastoral lands of the crown.

Purchasers of agricultural lands, legitimately occupied, alone require special aid, as the lots taken up are generally some distance from a Cross or Bye Road under the control of Road Trustees. It would be impossible to make roads to every small lot selected, but where a reasonable area has been taken up and settled upon, and having in the same locality crown land which could be profitably opened up for further settlement, a liberal grant would advantage all. I have given (in my Report under date of 5th May, 1869)† two cases from which it would appear that the present system has failed to give satisfaction to purchasers of agricultural lots, and that the existing laws as to roads and fencing do not meet the exigencies of such cases, of which there are similar instances throughout the Districts.

Surveyed lines of road are numerous throughout the crown lands, but for all practical purposes, in most cases, worthless. It is absolutely necessary that a right-of-way, and to make roads along recognised tracks, should be reserved; and I beg to suggest that it would simplify after operations (should a road really be required, and in the right place) merely to reserve such a right in the grant deed through all lots likely to be affected, adding a per-centage to the area sold for that purpose.

Drainage.—Improvement on this head is very important, having reference to the Fluke disease, and as affecting the revenue derived from the crown lands. The New Country lands are more expensive and difficult to drain—the marsh lands being more level and of greater extent—than the Lake Districts: I estimate the average cost of draining and ringing, on the former lands at from 3s. to 5s. per acre, on the latter and low land from 2s. to 3s.

It is popularly supposed that the Lake lands are more subject to give the Fluke disease than the low lands, but such is not the case. Lands which conduce to this disease are scattered profusely throughout all the Districts, and such marsh land—"New Country," "Lake Districts," "Windfalls," "Bogs," and "Lowland"—is chiefly held by private parties. In the gross the crown estate is more sound in this respect than private lands. Any scheme of drainage, therefore, to benefit the pastoral interests generally should include relief, by loan or otherwise, to proprietors of such land. Drainage upon a proper system can alone prevent the Fluke scourge; and land, private and of the crown estate, thrown out of occupation in con-

Vide Mr. Calder's Tasmanian Industries.
 † See Appendix, page 73.

sequence of its ravages, is so, because in the present very low state to which pastoral property has fallen, generally, the lessee or proprietor has not the capital to expend upon this improvement, and, in not a few cases, unable even to re-stock his own property.

There are a few cases to which special grants might advantageously be made; such as the deepening of the mouth of the River Dee (referred to in my Report of 2nd January).\* A point at Arthur's Lakes which requires blasting to gain a fall; so also at the Bogs, &c. Instances of this kind (which are not only beyond the means of private individuals, but that if carried out, would advantage many, and enable sections of crown land to be improved) are worthy of consideration.

Such blocks of crown land as would require an extra outlay for drainage might be specially dealt with upon an approved scheme for such improvement being submitted by the Lessee. An extension of lease granted in accord with amount of outlay.

Of disabilities from which the Pastoral interests suffer, the Fluke and Scab disease are the most serious. The first can only be overcome by making the land sound by a proper scheme of drainage. The second by combined and simultaneous action on the part of all flockowners to stamp it out by a proper course of dipping their flocks in such a recognised solution as will cure. This Report is not open to enlarge on the question now before them publicly, but as it very materially affects the occupation of the crown lands, I trust it may not be out of place to observe that, in the event of a good Act passing through the Legislature, I believe Tasmania would be a clean Colony in two years. The flocks free from this troublesome disease would be more valuable, lessen materially the cost of their supervision, enhance the value of the pastoral lands, and consequently tend to their increased occupation, especially at the present juncture when the value of the animal is so low (the crown lands were never more extensively occupied, returning the highest yearly revenue, than from 1850 to 1854, and during those years flockowners had equally low markets, sheep especially selling at prices analogous to the present time). The rocky, hilly, and scrubby character of much of the pastoral land is not an insuperable obstacle to the thorough eradication of the disease, as, apart from personal experience of such in the Lake and Low Country, the instance of Maria Island may prove. When that property was first occupied by the late Lessees, I saw a portion of the flock sent there from the interior. The Lessees had much trouble and expense for the first two years, but by careful and energetic treatment the disease was got rid of, and, I believe, for many years past the flocks have been perfectly clean, roaming over rugged country. No doubt, for a time better fencing will be found necessary, and some cost for material to cure; and as the flockmaster at the present time has many difficulties to contend with, it would assist and facilitate a cu

Considerable gain to the Colony would also accrue from the export of fine-woolled rams and ewes to the adjoining Colonies. Some 8 years since, I held authority to purchase for export from ten to fifteen thousand sheep, but in consequence of the scab disease it could only be partially carried out. During that year I assisted in agitating for a Dipping or Scab Act. A Bill was introduced by Messrs. Maclanachan and Gell, I believe, into Parliament, but if did not meet with approval. Since that time dipping has become more general, and many parties then opposed to any legislation upon the matter are now advocates for it from having experienced the benefits of dipping, although a portion only can be realized in consequence of not being general.

My duties having brought me into contact with a considerable number of flock-masters, ranging over the chief pastoral districts, the subject has been matter of conversation: the desire is now general that some suitable measure should be enacted. At the date to which I have alluded, I held the opinion that a compulsory Dipping Act should precede a stringent Scab Act, and I still think so. A short, simple Act, compelling all owners of sheep to dip them, with penal clauses as to travelling over a public highway, and compensation for damage done to other flocks from the owner of a diseased animal allowing it to stray, would, at present, be sufficient, and might be simply and effectively carried out.

Ringing of Trees and Burning off, &c.—As with drainage, so on this head I have noted, on the returns of each block of land, where the improvement can be profitably effected. Lands in the New Country can be so treated with great advantage to a considerable extent. The few instances where it has been done by proprietors testify to the benefit derived by increased and better herbage, as also tending to ameliorate the climate. The low lands of first and second class are also open to similar beneficial treatment. The Lake Country is not capable of so much improvement in this respect: the grassy upland of that district is not generally heavily timbered, and is of advantage for shelter. Where the land is heavily timbered it is chiefly rocky tier land.

Grown Lands which it would be advisable to sell.—Throughout the several districts there are lots so surrounded by private lands, and generally of inferior quality, as to make them valueless to any other than the adjoining proprietors; also in the settled districts, larger areas of surveyed lots of no value but for the timber. The Crown derives but a small revenue from these lands: although occupied, many lots return no rent. In my opinion such land should be offered at a very low upset price,—say from 2s. 6d. on most lots to 5s. on others,—excepting certain blocks as timber reserves, for working which, I think, a higher fee should be exacted,—the Crown forests in many localities in the settled districts now requiring to be more carefully husbanded.

\$ 1.89 SHE 1947 L

Agricultural Lands.—My report of the 2nd January, 1869,\* on Mr. Surveyor Smith's district, applies to such lands in all the districts subsequently inspected with the exception of Thomas's.

The New Country lands are not, in their present state, available for occupation as agricultural farms. Years hence they may be further utilised by raising root and green crops for dairy and fattening profits. The soil, generally, is rich, and well adapted for such purposes; and the country capable of maintaining a considerable population engaged in such pursuits. The Lake districts must ever remain purely pastoral, although capable of giving out a larger return than at present if occupied by resident proprietors. For all practical legislation, at the present time, these two sections of the crown lands may be ignored, under this heading. The low lands having been long settled upon, agricultural lots remaining to the crown, which could be profitably occupied, are scattered here and there, over a rugged country, in small areas. Such as I have reported upon in Smith's survey district, but more limited in number and area; Hogan's district (vicinity of Oatlands, The Bluff, Town of Tunnack, White Kangaroo River, Jerusalem, South Arm, &c.), is so weeded out, that 1000 acres (in small isolated lots) give an outside estimate; Thompson's district (vicinity of Fingal, Avoca, St. Paul's, and part of coast line), still less; Thomas's district (which takes in the New England and Dorset country) has a large unsettled area of heavily timbered rich agricultural land, greater portion unexplored, but in the more accessible parts similar to the others. From the north side of the South Esk River (after passing a narrow fringe of good land, all, or nearly so, in private hands) the country for miles (towards Ben Lomond, Tower Hill, Rose's Tier, Mount Saddleback, &c., thence to the coast line) is almost entirely barren,—a continued succession of rocky quartz ranges, covered principally with hop scrub, heath, and grass-tree; soil bad, quartz gravel, and sandstone shale; heavily timbered in most places, and throughout of little value as a pastoral country; unquestionably rich in mineral wealth, however, and will eventually—perhaps at no

I have noted in the detailed Return every agricultural lot in all the Districts which can be occupied with advantage.

Gould's Country.—I forwarded a Memorandum on this section, under date 26th April, 1869,† since which I have perused the Commissioner's Report of the 11th April, 1868, and coincide with paragraphs 3 to 12 inclusive. Paragraphs 7, 8, 9, 10, and 12 do not apply to the area surveyed. The latter paragraph (12) indicates the position of the road, which I had the honor to bring under your notice in the Memo. above referred to.

I am of opinion that the area surveyed was too large as an experiment for settlement, and before the country had been more thoroughly explored, especially at the point selected for entrance into this New Country: that, notwithstanding the varied character of the soil, such land—heavily timbered, and upon which a large outlay of physical labour and pecuniary means must be expended by the most industrious labourer—cannot be settled upon with advantage to the selector or the Crown upon the terms at present demanded. The terms appear liberal:—20 years' lease on payment of survey fee, with graduated rent during that time amounting to £142 15s.; and if the Lessee desires to purchase at the end of 20 years, he must pay a further sum of £80. Total for 80 acres, £222 15s.

I respectfully submit that the locality and character of the land should be borne in mind,—it is very heavily timbered: the timber of little value, at least on that section surveyed. Not a blade of grass, nor any land within a reasonable distance, as a commonage; so that until a few acres have been cleared and tilled to provide food for animals, all the operations necessary to cultivate the soil must be done by manual labour, tedious and costly. Throughout the Districts inspected, I have made it a matter of enquiry, when passing the small industrious Settler on heavily timbered lands, to ascertain their progress, and I find the average clearing, for each holding of one family, does not exceed three acres per annum; that in the majority of cases these holdings are badly tilled, and the occupiers eking out a precarious living. There are exceptions in each District: German families appearing most comfortable, and land better tilled, but in the gross as I have described. Such being the situation of the yeoman class within a few miles of the settled districts, enjoying some small amount of commonage for their animals, either by sufferance on the part of adjoining Proprietors, or from the Crown estate, with advantage also of being able to obtain occasional employment, the successful settlement of such land as that of Gould's Country must be more difficult and tedious. Sixpence per acre rent for the first two years seems a small amount, (on 80 acres, Two pounds), but as two acres would be a fair area for one selector to get in crop the first year, he would really pay Twenty shillings per acre rent: the remaining 78 acres being utterly useless to him.

I respectfully submit my opinion of the method which seems most desirable to adopt for the speedy settlement of this agricultural area. That any person may apply for one lot on payment of the survey fee (£8 15s.), to be returned if the lot is not awarded. The applicant being approved of, he is called

<sup>·</sup> See Report on Smith's district, page 15, on settlement of small agricultural lots in the settled portion of that district.

<sup>†</sup> See Appendix, page 72.

upon to sign a simple form of engagement, that he will personally reside upon such lot (Clauses 4 to 6, inclusive, of Waste Lands Act, No. 4, being entered); clear and cultivate not less than two acres per annum. After the second year to pay a rental of One shilling per acre upon the whole area originally selected for ten years thus giving (a normal value to the land of Ten shillings per acre to be expended upon roads). At the termination of that period to receive a grant deed upon payment of the usual fees; conditions of residence and cultivation having been duly carried out. Further, to encourage settlement and enterprise in bringing the whole block speedily into profitable bearing, that a grant deed should issue at any time during that period upon the selector satisfactorily showing that he had cleared and cultivated such lot throughout. If the lot was so brought into profitable bearing in the third year, the selector would be relieved from further yearly payment, and the products of the soil would, indirectly, return to the Revenue much more than an equivalent for the loss of the nominal rent.

Carefully weighing the terms upon which land can be obtained in the adjoining Colony of Victoria (land that requires little outlay beyond fencing to enable the plough to enter, and where, within my recent knowledge, several of our small Capitalists have migrated, and others proposing to do so,) this Colony having now no agricultural lands but such as are densely covered with scrub and heavy timber, entailing a large expenditure before the plough can enter, I am of opinion the time has arrived when such lands should be offered for actual settlement upon terms that will suffice to pay survey fees and the smallest yearly payment possible as a contribution towards the opening up of such land by ordinary bush roads in the first instance. I think Ten shillings per acre ample for this purpose. The pastoral lands of the Crown requiring no considerable, if any, amount of aid from the Land Fund for road purposes, a portion of the annual rental derived from crown lands so favoured should be devoted to the improvement of the less favoured portion of the Crown estate. The Pastoral Lessee or Purchaser at once has a return for his outlay; the Agricultural Settler must toil and expend much capital before he derives a cent. of profit.

A previous paragraph notes such pastoral and waste land as appear desirable that the Crown should quit. The remainder (all pastoral blocks that can be profitably settled upon) I respectfully suggest should be withdrawn from sale. That the land should be offered to the public upon lease in such area, according with class, that will carry not less than 500 sheep up, and upon terms that will conduce to the improvement of the lot. Tenure of lease for First Class, 7 years, Second Class, 14 years, Third Class, 21 years, with power to purchase upon termination of the lease the whole block (at, say, Twenty shillings per acre for First Class, Ten shillings for Second Class, and Five shillings for Third Class) upon a credit payment of eight years as at present in force; such latter extension of credit being awarded provided certain defined improvements had been made during the past lease-holding to the value of at least Two shillings per acre on First class blocks, One shilling per acre on Second class, and Sixpence per acre on Third class. Or, if purchase is not desired by the Lessee, lease may be extended, provided certain improvements (value as above) of draining, ringing of trees, fencing; or such other improvements as the normal condition of the block required, have been carried out, to a further term of, say, Three years for First class, Five years for Second, and Seven years for Third class, at the same rental as previously paid. That these lands should be open to occupation by tender. Leases put up to public auction will find most favour with those interested, but, I think, with a less beneficial result to the Crown. If by auction, a fixed upset price should be named in accord with the valuation.

I am of opinion that the length of tenure alone will not suffice to induce Crown Lessees to materially improve the Crown Estate, as for example, those lands taken up under the Regulations of 1851, of which in the Districts inspected 124,503 acres are held by fifty-two (52) lessees. There is not one case of legitimate occupation by personal residence of the original selector or any member of his family, or of the land being so occupied by Colonial youths for whose especial benefit the Regulations were framed; nor has any notable improvement been made upon the land so held. Ordinary fencing, shepherd's log hut, and sheep-yards alone testify to occupation, and the same has been effected on lands leased without any such enjoyment of tenure.

This inducement having failed to bring about legitimate settlement upon, or tangible improvement of, these pastoral lands, although occupied during a period of great prosperity to the pastoral interest, shows, I think, that length of tenure alone will not lead to the improvement of the Crown Estate. Tenure with power to purchase the whole block, upon easy terms, provided certain improvements have been made, or extension of lease, appears most equitable to the tenant and the crown.

No right to purchase a portion of a block should be given unless it is of such an area as will ensure bonû fide settlement, and selected with reference to position, so as not materially to lower the value of the remainder.

My reports upon Messrs. Smith's and Sorell's Districts called your attention to the prejudicial working of Clauses 19 and 20, ("Waste Lands Act, 1863"); and the same remarks, as affecting the value of crown pastoral lands, apply to the "Pre-emptive Right" selections of 1851, &c.

It is sound policy to offer every inducement for the legitimate occupation of the Crown Estate, especially by small occupiers, as population produces the real wealth of the country. Selection of land which does not bring this about, but deteriorates the value of the adjoining land, is manifestly unwise; and the maps show many instances where land has been selected with no other object than to lock up from fair value being given for, either by rent or purchase, a larger area adjoining.

My-Report\* of 18th February, 1869, on the Lake Districts, suggested the advisability of assuring the present holders of "quiet enjoyment" blocks of land, that they would be reimbursed for such improvements—draining, ringing of trees, stone-wall fencing, &c.—they might make from this date, in the event of the land passing from them at the termination of the present lease; or that an extension of lease be assured, provided certain improvements had been carried out,—the term, according to the value of the improvements. As the area (124,503 acres) thus held does not fall in for some three or four years, and as it comprises the most valuable portion as a whole of the Crown Estate, I respectfully repeat the suggestion and refer you to that report for further remarks.

I have preceded this Report by detailed Returns which, together with maps compiled therefrom by direction of the Surveyor-General, show minutely the general character of each block of available crown land in the Districts I have inspected. To these Districts only are the observations and suggestions herein made to be applied, showing its position, capabilities, approximate value, and in what respect it can be improved and further utilised. Summaries are attached to the Returns of each District, and Progress Reports on part. I have been careful in combining lots to note the configuration of the country, existing fences, quality and character of land, so that each block should be in accord with the character assigned, and so far as position and area would admit, in blocks suitable for profitable occupation; so that, in the event of the Legislature affirming the principle that the pastoral lands should be so leased, this necessary work will not require further expenditure of time.

I have not made any return or remark upon the Survey District, (Wedge's) which has not been fully gone ever in consequence of this report being called for, but that (although one of the most important Districts) ended would not affect the tenor of my suggestions. There are blocks of land scattered throughout the several districts suitable for settlement as small agricultural and pastoral farms—not profitable if separated but combined—the most judicious manner in which they can be advantageously occupied. The detailed returns note all lots of pastoral land having such an area of agricultural land as is suitable for settlement, and on completion of my field duties, I propose to make up a special list of such for easier reference.

I attach an Abstract of the Crown Lands in the six Survey Districts completed, showing the classification and annual value, &c.

In this final report upon the districts under review, I have necessarily repeated remarks made in former Progress Reports. The information combined in these Reports, I trust, approaches in some degree the necessities of the important duties entrusted to me, as I have endeavoured to carry them out faithfully.

I have to acknowledge suggestions from the Surveyor-General, with prompt and courteous attention in all matters connected with my duties.

I have the honor to be, Sir,

Your most obedient Servant,

ROBERT CRAWFORD, Commissioner Inspecting Crown Lands.

#### APPENDIX.

#### EXTRACTS FROM PROGRESS REPORTS.

Interlaken, 18th February, 1869.

Interlahen, 18th February, 1869.
The Lake Country, from the severity of its climate, and especially from spring and summer frosts, cannot ripen the commonest cereals, such as oats or Cape barley. Root crops would flourish, but there is no considerable extent of land suitable; and it would be a great mistake to break up the natural grasses in order to lay down artificial ones. As the swamps and lagoons are reclaimed in after years, they may be sown down. In considering this section of the country, therefore, it should be borne in mind that it is purely pastoral, and chiefly available during the summer months for pasturage: and it is upon this space of time that the annual value is estimated in most cases.

In my statement of its carrying capacity and annual value, I have been most anxious to arrive at a correct estimate. The detail of each block of land has been carefully considered; and I have had special opportunity this year in verifying my own judgment, as the stock usually sent to the Lake Country was all up, and I made a point of ascertaining from the shepherds the number of stock depasturing upon a given area. I have been careful not to over-estimate the carrying capacity, as one of the great evils of Tasmanian pastoral farming, generally, is the prevalence of over-stocking.

I enclose a return (marked B.) that shows an area of 74,533 acres, fenced in, and now being depastured upon, although marked as vacant on the maps furnished to me.

\* By my estimate, this represents an annual rent of £1187, or, by the ordinary crown rent, £745.

The loss arises, in my opinion, principally from the following causes:-

vyggevi) sjylet i i James e e

1st. The system of leasing purely pastoral lands in small lots. No practical farmer would, or does, lease simply a block of 500 or 1000 acres,—to be profitable in such a country, he must hold land for at least 1000 sheep. Practically, the land is taken up for many more, and, in not a few cases, nothing like an adequate quantity leased and paid for. By a judicious selection of a small lot here and there, or a good marsh lot which renders the adjacent upland of little value to others, a considerable area can be locked up.

2nd. The Clauses 19 and 20, Waste Lands Act, 1863, which allows a lessee (and, if the land is not leased, any other party) to select for purchase a small lot wherever and in what manner he pleases, with the selections under the regulations of 1851, have operated most injuriously to the Crown Estate (in so far as the pastoral lands have been affected). The regulations have not tended to legitimate settlement, or profitable to the revenue. Several instances have come under my observation where the purchase in this manner of a comparatively small lot has destroyed the value of a thousand acres, or more, for occupation by another, or for future sale; and I strongly advise that these sales should cease whenever such selections lower the value of the adjoining pastoral land.

3rd. No fixity of tenure to the lease lowers the value, encourages a lax method of rental, and discourages improvement of the crown lands.

The remedy, I think, is to combine the lots of land, as now surveyed, into such a block as will comprise the requisite area,—taking the natural configuration of the country and quality of the land as to quantity in each block, and in classing this section of the country I have kept this in view: each printed form contains a description of the lots so combined as to make up a block according to its merits. The land offered in this manner (with a fixed term of lease) would be more valuable, the Crown would derive the proper rental for all the land occupied, would be in proper form for the market, and simplify the letting. I give two illustrations: A block of land in the Lake district, consisting of 5000 acres (Quiet enjoyment block, having six years to run) rented, and 500 acres private, total, 5500 acres, was re-let two years ago for £250 per annum, and during the term the tenant to maintain effectually all existing fences, &c., and erect others. Again, this year, a Quiet enjoyment block, of 3860 acres, rented, combined with 6000 acres private, was re-let, for a term, at £400 per annum, the crown land being nearly as valuable as the private. These several lots of land are fenced into one useful working property, have fixity of tenure, and were properly put before parties requiring such. As at present, except by the initiated, it is impossible for the general public to select from the maps such lots of crown land as would form a profitable working block.

The instances of value given above are not exceptional nor peculiar to this season. Had the pastoral lands of the crown been in the market this year in some such form, I am persuaded that nearly every block in the Lake Country would have been taken up.

I would respectfully press upon your consideration the propriety of encouraging the present holders of "Quiet Enjoyment" blocks of crown land to a further improvement of their land. These blocks, with two exceptions, are first class, and form the most valuable portion of the crown estate in this part of the Colony; and come back to the crown during the current years to 1870.

I cannot note improvements of any great value as having been carried out by the holders of these "Quiet Enjoyment" blocks in this section of the country. Draining, the most important, has been very much neglected. A few attempts have been made, but, with two or three exceptions, without any method, and the labour thrown away. Messrs. Maclanachan and Keach give the best examples. The first named has commenced upon a sound practical scheme which, carried out, will effectually cure the land, get rid of the Fluke disease, and bring it back to profit the housing. profitable bearing.

If the Government could at once advise the present holders that they would be reimbursed in the event of the land passing from them at the expiration of the present term for all permanent improvements made, (draining and stone-wall fencing specially), I believe many of the present tenants would at once set about such work. I would beg to suggest that the date of occupation of all pastoral crown lands, especially of the New Country and Lake Districts, should be uniform, commencing not later than 1st January. Stock depastured in these Districts are, as a rule, brought down to the lowlands for shearing and regulating during the months of November and December, and returned to the runs in all December and January; and in the event of the Legislature adopting the views which I have expressed of leasing the pastoral lands in larger areas, I beg to suggest that the present crown tenants should be given three months' notice of the resumption of all leased lands, in order that they may be offered on the amended areas this complete ease and thus save a year. on the amended areas, this coming season, and thus save a year.

I have, &c.,

(Signed)

ROBERT CRAWFORD.

The Hon. the Colonial Treasurer, Hobart Town.

# EXTRACT FROM PROGRESS REPORT.

Fingal, 26th April, 1869-

#### GOULD'S COUNTRY.

This area of land has been surveyed at considerable cost, and a special Act of Parliament passed in order to induce parties to settle upon it. Without touching upon the question of the character and capabilities of the land, I beg respectfully to place the following observations before you:—"That the scheme will be a failure unless steps are taken to proceed with roads and bridges at the earliest possible time, as at present it is impossible for any person to settle upon it with advantage. Many parties have been viewing the land and noting the work which has to be encountered without a road, return and spread unfavourable reports. In my opinion it would be wise economy to anticipate the settlement of this land by a moderate expenditure on the opening up of certain roads and erection of one bridge. A bridge should be thrown across the George's River (at the point marked B on the enclosed sketch plan), the road cleared by the Board of Works should be further improved by cutting down the sideling banks, with culverts across the small rivulets and boggy places; tracks should be opened up in the same manner (as has already been done by the Board of Works) some two or three miles further into the surveyed area, along the route marked C. D. E. The cost of the whole would be about £300, bridge included. I also beg to submit the route (marked A. on the plan), which I examined on making for the north-eastern side of the surveyed area from a point on the George's River; as now opened it is a fair bush road, no difficult hills to surmount, and leads into the agricultural area at a much more favourable point for immediate settlement than the other one. The land also, at this point, is much more level, and abounds with fine splitting timber. The distance from shipping point at the Bay about the same as the other. The improvement of this route, and opening out of two or three miles of a bush track through the surveyed lots, could be accomplished for about £150. I beg to call special attention to this route, as it will tend to

The following are the paragraphs in the Commissioners' Report on this country, alluded to in my Report of the 12th August, 1869. The last paragraph (12) indicates the country which the above-named road would open up. Paragraphs 3, 4, 5, 6, and 11 describe the area surveyed for settlement. 7, 8, 9, and 10 do not apply, the survey ending before reaching the first plain.

#### EXTRACTS FROM THE COMMISSIONERS' REPORT.

- 3. Proceeding a short distance along this track the Commissioners came upon a second, branching from it at a right angle and running along the Groom. This was examined, and found to be hilly, passing through some good land, then over two inferior stony rises, and terminating in a tea-tree marsh. On returning to the main track, land is soon found of a very high class, quite equal to the most favourable reports previously made upon it; but as this track goes along the hill side it leads occasionally over a light gravelly soil of an inferior character, but such as would be serviceable if embraced in blocks comprising some of the richer land of the flats.
- 4. At 2 miles 28 chains from the River Groom they reached the end of the Board of Works Track, and went on to the camp  $1\frac{3}{4}$  miles on Mr. Thomas's Northern Track.
- 5. On the same afternoon the Eastern Track was examined. It is 2 miles in length, commencing with a very steep ascent over the first hill. The soil is not particularly good. The second hill is also steep and stony, but the land improves on the eastern side; there are then a succession of short steep hills and wet gullies to the end of the track, the soil of fair quality, but difficult of access.
- 6. On the 20th March started for the Plains: the travelling was very tedious from the boggy nature of some of the creeks. For a mile the ground was level and of splendid quality, then for three miles the land is almost all good but hilly, and in some places stony, after which the ascent to first plain becomes steeper, and the land of a less desirable character. The plain itself is of small extent, stony, and scantily grassed: the elevation being considerable, all vegetation assumes a dwarfish character.
- 7. From the plain the track descends rapidly, passing through a myrtle forest, then into rich ground through several steep-sided creeks, soil approaching chocolate, but very stony in some places. The myrtles here are of great size, and the soil continues good right on to Plain No. 2.
- 8. The plain is 2 miles in length with an average breadth of about half a mile, very sparsely grassed, covered with heath, moss, and small flowering plants, intersected with numerous creeks, and in many places boggy; the soil, nevertheless, seems to be of good quality in some places which were examined, and the neighbouring hills are covered with a luxuriant growth of timber to their summits; groves of silver wattle, myrtle, and lightwood cover the slopes which run into the plain in every direction, and create an effect so strikingly beautiful as to baffle description. On the northern side the timber is mostly white gum, with underwood of prickly shrubs and some

- 9. Before this plain can be made available for agriculture an outlet must be discovered either round the northern side of the Blue Tier or down the valley of the Groom: no road for produce could be constructed anywhere near the present track.
- 10. The vegetation differs very slightly throughout the whole of this country: large tree ferns abound everywhere even on the rocky hill tops, and there is an undergrowth in the valleys of the water fern and cat-head fern, while on the hills these latter are displaced by another variety bearing some resemblance to the water fern but of a much darker shade, with greater breadth and strength of leaf.
- 11. The Northern Track, starting from the end of the Board of Works Track, proceeds for five miles over a country of varied character. For 12 miles the land is good, level, and easy to clear, when a steep hill is ascended stony and gravelly to end of 2nd mile; the soil then improves, but in a short distance becomes poorer again; and as the hills are steep and in many places rocky, the Commissioners do not consider that there is much land immediately adjoining the latter portion of this track which is likely to be required for present use.
- 12. Near the top of the hill known as the Northern Sister an exploration track of Mr. Thomas's was crossed, which leads into a rich valley where land was applied for in 1862, on the recommendation of Mr. Gould, but abandoned for want of a road. After descending the hill some good land is met with opening out on the Marshes, and from that quarter also it is probable that New England will ultimately be penetrated.

#### EXTRACT FROM PROGRESS REPORT.

Fingal, 5th May, 1869.

1 enclose a tracing of a portion of this District in order to explain how certain lands are comparatively locked up from the want of a suitable right of road. Some of these blocks of land have been recently purchased from the Crown, the holders of which complain of the position in which they are placed. First, the Town of Evercreech (on the north side of the River Esk) is placed at great disadvantage in consequence of the surveyed streets having been laid out through the lowest parts of the land, leading across several creeks and swamps which would entail a very heavy outlay to form a road, and beyond the means placed at the disposal of the Board of Works.

The whole of this lower part of the town has been purchased by one person, who also holds land (marked yellow on the plan) through which no streets are laid out, and it is through that strip, as indicated by the red line, that the settlers in the locality desire a road. The proprietor of the land in question agrees to give a road through such, upon consideration of the land taken up by streets on the other portions he has purchased being given up to him. A road opened out as indicated would advantage the present settlers and crown land beyond.

Second, a road giving easy access to the country below Evercreech, on the eastern side of the River Esk, is of great consequence to parties located at that part, as also forwarding the occupation of the crown lands. The road which would be of most advantage is that traced from A. to B. on the map, and this runs through private land, the proprietor of which, I am informed, claims heavy compensation, on the ground that there would be a severance of his land from water frontage, and the amount of this claim prevents a road being laid out in the proper place.

A recent purchaser of crown land adjoining this estate is almost entirely excluded from direct communication with the existing cross road, and complains that the Government should have sold him land with a reserved road through it, but without access otherwise. Be this as it may, the road noted from A. to B. would benefit many others and the Crown estate in that locality. I beg to suggest that instructions should be given to the District Surveyor to survey the line, and that the Board of Works should move the Road Trustees to call upon the Proprietor of the land objecting to the road, to name an Arbitrator, &c. As the land through which the road would run is purely pastoral and need not be fenced, I believe a very moderate compensation would suffice, the area required being only about 12 acres. The sum necessary to cover the compensation and opening up of the road should, I think, come from the Board of Works' funds, especially as such fund is granted for the express purpose of carrying out the engagement upon which the land is sold; namely, to give access to the land sold by opening up roads from existing roads under the control of the Road Trustees. In ignoring the claims of such purchasers from the exclusive benefit of such fund, it appears to be overlooked that these new settlers are rated by the Road Trustees to maintain existing roads in the same ratio as all other properties. The Chairman of the Board of Works in this District informs me that the rule adopted is to apportion the fund placed at their cisposal equitably over the several parishes of the district, which appears a legitimate and fair distribution, yet it has failed to give satisfaction.

ROBERT CRAWFORD.

ROBERT CRAWFORD.
