PARLIAMENT OF TASMANIA.

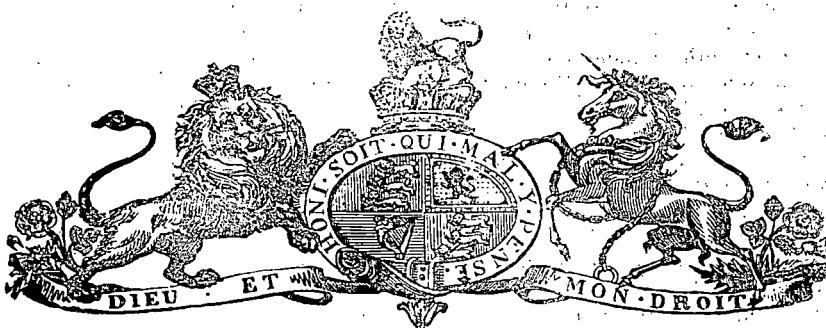

---

METEOROLOGICAL DEPARTMENT:

REPORT FOR 1886.

---

Presented to both Houses of Parliament by His Excellency's Command.

## *REPORT of the Meteorological Observer for the Year 1886.*

---

SIR,

I HAVE the honor to submit the Annual Report of the Meteorological Department for the year 1886 for your information, containing tabular forms of the Observations recorded at the various stations; also a table of the severest earthquake shocks felt in Tasmania during the year 1886.

Observations have been recorded at eight meteorological stations; also maximum and minimum temperature is taken at Fingal and Mount Bischoff.

On 1st September, 1886, I took over from Mr. Charles Abbott the work of keeping correct mean time for the dropping of the ball at 1 p.m. daily. The time is now also transmitted from the Observatory through the Telegraph Office, Hobart, electrically to Launceston and all telegraph stations south of Launceston.

I am indebted to Mr. R. L. J. Ellery, Government Astronomer of the Melbourne Observatory, for providing me with the necessary clock and fittings for giving the signals; also to Mr. R. Henry, Superintendent of Telegraphs, for the interest he has taken in the matter in personally supervising the electrical arrangements and completing them satisfactorily.

I have the honor to be,

Sir,

Your obedient Servant,

J. SHORTT, *Meteorological Observer.*

*The Hon. the Treasurer.*

#### EARTHQUAKE Phenomena in 1886.

Tasmania was disturbed by a few shocks and tremors during the year. The strongest was that of 8th March, which was felt at Gabo Island. The time of occurrence as felt there and in Tasmania agrees well with the supposed centre affecting us. But since the violent eruption in New Zealand on June 10, 1886, and a few subsequent outbursts that took place soon afterwards, shocks and tremors have been more frequently felt on the continent and at places on the N.W. coast of Tasmania, though not experienced on our East Coast, which has been more disturbed than other districts since the commencement of the continuous tremors beginning in April, 1883.

## MEAN AND EXTREME RESULTS FOR THE YEAR 1886.

From Observations taken at Hobart.

*Barometer—*

Highest reading .....	30.720 inches, on 17th July.
Lowest ditto .....	28.760 inches, on 7th September.
Range for the year .....	1.960 inches.

*Thermometer—*

Radiation, Solar, maximum .....	160°, on 5th January
Ditto, Terrestrial, minimum .....	18.7°, on 16th July.
Maximum in the shade .....	100.2° on 5th January.
Minimum ditto .....	29.5°, on 16th July.
Range for the year .....	70.7°
Highest mean daily reading for one month.....	63.8° January.
Lowest ditto ditto.....	45.8° July.

*Humidity—*

Mean maximum for one month (saturation=100)	88, June.
Mean for the year .....	78

*Condensation—*

Total for the year.....	21.39 inches.
Total Number of Rainy Days .....	189
Maximum fall for one month:.....	2.88 inches, November.
Minimum ditto ditto .....	0.28 inches, June.
Maximum fall in 24 hours .....	1.56 inches, 9th January.
