PARLIAMENT OF TASMANIA.

---

**CODLIN MOTH REGULATIONS.**

---

Presented to both Houses of Parliament by His Excellency's Command.

## GOVERNMENT NOTICE.

No. 371.

*Chief Secretary's Office, 22nd November, 1886.*

THE Administrator of the Government in Council has been pleased, in accordance with the provisions of Section 12 of "The Codlin Moth Act, 1884," 48 Victoria, No. 5, to make the following Regulations.

By His Excellency's Command,

J. W. AGNEW.

---

### REGULATIONS.

Every occupier of an infected orchard shall give notice to the Inspector, either personally or in writing, by posting the same to his address, within twenty-four hours of the existence of the moth in such orchard coming to his knowledge.

The Inspector may cause any tree or the trees in any portion or portions of an orchard to be bandaged; all rough or scaly bark shall be removed from the butt of the tree and extending to one foot above the bandage, and such bark shall be, as soon as it is removed, entirely burnt, or otherwise effectually destroyed.

All bandages to the trees to be on by the first of December in every year, and to be removed and cleansed, and all grubs therein destroyed, at least once in every four weeks until the first day of April in each year.

A bandage shall be considered cleansed and rendered fit to be again used for that purpose when all grubs found therein are effectually destroyed.

All infected fruit growing on the trees shall be at once gathered, and all infected fallen fruit shall be forthwith picked up and the moth therein destroyed, by such fruit being immersed either in cold water for not less than twelve hours, or in boiling water for not less than fifteen minutes, or by such other means as the Inspector may deem effective.

Bandages may be made of any woven material.

Where from the formation of the tree, in consequence of the branches and limbs being close to the ground, it is difficult to bandage the trunk of the tree, it shall be sufficient if the bandage, rolled up, is placed on a fork of the tree as near the ground as possible.
