

Update on \$10 Billion Growth Target in the Agricultural Sector by 2050

Mr SHELTON question to MINISTER for PRIMARY INDUSTRIES and WATER

We know the importance of farming and agriculture to our state, and it is well known we have a target to grow the value of agricultural sector to \$10 billion by 2050. In a recent conversation at the truck run at Longford, in the middle of a very substantial agricultural area, one of the farmers asked me to provide an update on how the state was going in reaching those targets. The question to you is: can you provide an update on how we are going towards meeting the target?
