TASMANIA.

## MAIN LINE RAILWAY.

TRAFFIC RETURNS.

Laid upon the Table by the Colonial Treasurer, and ordered by the House to be printed, August 24, 1869.

Hobart Town, 19th July, 1869.

SIR.

In accordance with instructions received from you on the 8th January last, I have taken the necessary measures to collect the Returns of Traffic on the Main Line of Road between Hobart Town and Launceston.

In order to ensure as much accuracy as possible in these Returns, competent persons have been employed for this purpose at Ten different Stations between Hobart Town and Launceston; viz.—New Town, Bridgewater, Brighton, Green Ponds, Oatlands, Ross, Campbell Town, Cleveland, Snake Banks, and Breadalbane. These Stations comprise the principal Townships on the Main Road, to and from which, and to and from Hobart Town and Launceston, must necessarily arise all traffic of any importance. All intermediate traffic not specially derived from any of the places named is also included in the Returns so far as it affects the Main Road.

The Traffic Returns, from which the Tables accompanying this Report were compiled, were taken for the four consecutive months of February, March, April, and May in this year, during which months every description of traffic was noted down which passed through each of the Stations named above, between the hours of five o'clock A.M. and nine o'clock P.M.—viz., sixteen hours.

The Traffic Returns for the night, i.e. from nine o'clock P.M. to five o'clock A.M., the remaining eight hours of the twenty-four, have been taken for the month of March only. The traffic on the Main Line of Road between these two hours being comparatively inconsiderable, as shown by Table E., one month may be fairly taken as an estimate for the twelve months, the main traffic being nearly exhausted during the sixteen hours first named; most of the heavy traffic passing through any one of the Stations during the night, making its appearance at one or more of the other Stations during the day-time, being consequently included in the returns of the traffic during the sixteen hours.

In all cases where this double Return occurred in the month of March, it is eliminated from the Night Traffic and retained in the Returns of the Day Traffic.

I now proceed to an explanation of the Tables accompanying this Report:-

### TABLE A.

This Table shows the gross amount of heavy traffic passing through or arriving at each Station for the four months named, including all traffic that may be derived from the immediate neighbourhood, all traffic coming from different directions, and reaching the Main Road either within the Station or within a short distance from it, and also all empty or returning carts, drays, and waggons.

No firewood is included in this Return; but the quantity of wood consumed at each Station has been estimated as nearly as it can be ascertained, with the exception of New Town and Breadalbane, in which cases the quantity stated is only that passing along the Main Road to Hobart Town and Launceston respectively.

Very few bullocks are employed in travelling for any considerable distance on the Main Road, bullocks being chiefly used between places to the east or west of the road and the several Townships. When they have been found to occur in these Returns—the weight of the load having been ascertained as nearly as possible—the number of horses has been estimated in proportion to the number of bullocks, and so included in the Returns.

The Breadalbane Return does not include any traffic between Longford and Launceston, and Evandale and Launceston.

## TABLE B.

This Table shows the number of vehicles containing passengers, and the number of persons on foot or on horses passing through each Station for the four months named, but includes no person known to be residing at or near the Station, or arriving at the Main Road within three miles of the Station, whether in vehicles, on horses, or on foot; consequently all passengers in vehicles or otherwise, here enumerated, are bonâ fide travellers on the Main Line of Road for an appreciable distance, which will be specified hereafter.

In the New Town Return no vehicle or passenger is included, passing between Hobart Town and New Town only.

In the Breadalbane Return no passenger or vehicle is included passing to and from between Longford and Launceston and Evandale and Launceston.

In this Table the passenger traffic by mail between Hobart Town and Launceston is included in the Night Traffic, being the only exception to the hours specified in the commencement of this Report, the mail travelling from half-past six P.M. to eight o'clock A.M. To avoid confusion, the number of passengers by that conveyance is affixed to the Returns of Night Traffic at each Station for the month of March. It will be seen that, this portion excepted, the Night Traffic is again very light.

With reference to passengers returned as travelling by stage-coaches, the number is very much in excess of the average number of passengers by those conveyances, the Returns being taken at the time of the year in which there is usually a great influx of travellers from the neighbouring Colonies.

### TABLE C.

This Table shows the gross number of stock passing through each Station for the four months.

In the Returns of Bridgewater and Cleveland, the stock arriving at the different Sales are only enumerated once.

### TABLE D.

This Table shows the estimated gross amount of traffic of all descriptions passing through each Station for twelve months.

This estimate is calculated from the Returns of the four months, February, March, April, and May, as referred to before; the Night Traffic being included, calculated from the month of March only.

### TABLE E.

This Table shows the amount of heavy traffic to and from each Station on the Main Line of Road; also between each Station and other places of importance, and Hobart Town and Launceston, for the four months,—showing, also, the actual tonnage of goods carried, the number of miles traversed, together with an estimate of such intermediate traffic passing along the Main Road as is not included in the traffic previously enumerated.

In this Return all traffic has been eliminated emanating from any place to any one of the Stations situated within three miles of that Station, or reaching the Main Road within that distance and not passing beyond the station.

No returning drays, &c., unless with loads or partial loads, are included; and the number of horses is estimated as closely as possible at the actual number employed, being only those drawing original loads and returning with full or partial loads, the return loads being in many cases very light.

The through traffic of goods between Hobart Town and Launceston by carriers is not of any considerable amount during the whole twelve months, and is not distinguishable by any Collector of Returns from other goods carried at the same time for places in the Interior, the goods being occasionally transferred to other waggons in the course of transit; but this apparent omission does not alter the amount or mileage of the Traffic Return, as all such traffic is included in the tounage between Hobart Town and Oatlands, and Oatlands and Launceston.

A considerable quantity of the goods shipped at Bridgewater for Hobart Town, either by steamer or river craft, is necessarily included in these Returns, so far as the traffic from places on the Main Road to Bridgewater is concerned; but more goods arrive at Bridgewater for this purpose

which reach the Main Road either at or within a short distance from the shipping-place. The addition of these goods would increase to some extent the traffic between Bridgewater and Hobart Town if they were forwarded by land carriage.

No wool is included in this Return, the amount of wool traffic being taken into consideration subsequently.

### TABLE F.

This Table summarises the whole amount of actual traffic on the Main Line of Road for twelve months, assuming that the Traffic Returns for February, March, April, and May form a correct basis for an estimate of the traffic for the other eight months.

With reference to the light traffic, it has been found impossible to ascertain the exact distances travelled along the Main Road by every passenger and every light vehicle: in very many cases they have been ascertained; but as all persons are excluded from the Returns who are residing in the immediate neighbourhood of any Station, or within an unimportant distance from it, and not travelling further, the whole number enumerated may be considered bonâ fide travellers; and the estimate of mileage travelled by each passenger or vehicle has been assumed to be the mean of the distance between the next preceding and the next following Station, which must inevitably give the nearest approximation to a correct result, and which is borne out by comparison with the information that has been more exactly ascertained.

The traffic by hawkers has been dealt with in the same way. The amount is not very considerable. The weights of their several loads have been estimated as nearly as it was practicable to do so; but from their miscellaneous character, and the constant change by sale or barter, it is difficult to make a correct estimate. Their destination is also very uncertain. The mileage, therefore, has been taken on the same footing as that of the light traffic.

The loose stock here enumerated is all that passes from any important distance along the Main Line of Road. A large number of stock comes into the Main Road at the several Stations, and at the places where Sales are held, but of this a considerable portion is carried off to the right or left, without travelling far in any direction that would affect these Returns.

No wool, as has been before stated, has been previously included in these Returns, the principal part of the wool having passed to the two shipping ports before the 1st of February, the date of their commencement.

The average quantity of wool exported in the year 1867 and 1868 was 5,400,000 lbs. or 2410 tons: the wool derived from the Districts of Clarence, Deloraine, Evandale, Franklin, George Town, Glamorgan, Kingborough, Horton, Selby, Longford, New Norfolk, Port Sorell, Richmond, Spring Bay, Sorell, and Westbury does not affect these returns. The quantity of wool, specified in the Table, is computed from the number of sheep in the different Districts which supply the traffic on the Main Line of Road.

The total number of sheep in the Colony at the date of these Returns is estimated at 1,749,213; for the Districts not mentioned in the above exceptions, the number of sheep is 1,054,360; which number gives, as the proportion of wool to be included in these Returns as carried on the Main Road, 3,254,936 lbs., or 1453 tons to be divided as to distances in the manner specified in the Table.

It will be seen that the quantity of firewood consumed at seven of the Stations at which these Returns were collected is estimated at 8460 tons per annum. Firewood is exceedingly scarce in the immediate neighbourhood of some of the large Townships, and an addition to the traffic already alluded to may be calculated upon from this source, irrespective of what might be disposed of at New Town, Hobart Town, and Launceston.

As these Traffic Returns have been collected as information required with reference to a Main Line Railway, and as a completion of Table F., a calculation has been made of the Revenue derivable from the traffic enumerated. The heavy traffic has been calculated at sixpence per ton per mile. The present rate of carriage on the Main Road varies a little at different places, but may be averaged at from two pounds to two pounds tenshillings per ton for sixty miles, or from eightpence to tenpence per ton per mile. The Railway rates of carriage for heavy goods in Victoria is, on the Murray Line, 3.817d. per ton per mile; on the Williamstown Line, 5.482d. per ton per mile; on the Ballarat Line, 4.179d. per ton per mile. It is assumed, therefore, that a medium rate of sixpence per ton per mile will be a sufficient guide for the purpose of these Returns.

The light traffic for passengers of all descriptions is calculated at  $2\frac{1}{2}d$ . per head per mile, assuming that all passengers there enumerated are  $bon\hat{a}$  fide passengers for the distance named. The present cash fares here are £2 for each passenger from Hobart Town to Launceston inside, and

£1 10s. outside, or 4d. and 3d. per head per mile respectively. The average rates of passenger traffic in Victoria, on the three Lines before named, is, First-class, 2·247d. per head per mile; Second-class, 1·501d. per head per mile. No calculation is made with reference to loose stock, as I cannot find that any definite rate is fixed in the other Colonies for this description of traffic, except in the case of horses,—the transit of cattle and sheep being usually a matter of special agreement. The published rate for horses in Victoria by Railway is, under 40 miles, 20s. each; above 40 miles, 6d. per mile.

Having concluded such explanations as I conceive are required by the Tables accompanying this Report, I think it necessary to point out that there are two considerations which would considerably modify, as an average of years, the amount of traffic as carried out in the results arrived at. The first consideration is the proportion of traffic for the different months of the year. The total amount of traffic is estimated from the returns taken only for the months of February, March, April, and May. On the assumption that the deliveries of hay and grain may be said to commence about the 1st of February, these Returns may be considered a fair estimate for the succeeding three months of June, July, and August. In the remaining five months of September, October, November, December, and January—wool being excepted and dealt with specially—the goods traffic is comparatively light; but in the absence of any specific Returns I have no means of ascertaining the relative proportion of traffic in the several months. The second consideration is the difference of seasons. The present year, from the unfavourable character of the past season on the Southern side of the Island especially, is, from all that I have been enabled to gather from those best acquainted with the subject, unquestionably in its results of produce considerably below the average of some years past. I have not the advantage of having the Returns of crops for 1868-1869 before me, so that I cannot form a comparison which would show the increase that might be added to the amount of traffic, to bring the results now laid before you up to those of an average year.

The gross amount of heavy traffic on the Main Line of Road for the present year, exclusive of wool, is shown to be by this Report 22,092 tons, conveyed for the respective distances affixed. I think it desirable, in support of the correctness of this conclusion, to call your attention to the Statistical Return of the quantity and produce of land in crop in the years 1867–1868. I am not able to refer to the Return for 1868–1869, as it is not yet complete; but any estimate of the crop for the present year must, for the reason I have already stated, be taken at considerably less than that of the previous year.

In 1867-1868 the produce of the whole Island is stated to be, in the Return above quoted :-

Wheat, barley, oats, pease, beans, tares, and grass seeds Potatoes Hay All other produce except fruit	37,568 33,993	22 . 12
Making a total of	133,355	tons.

This total quantity of produce necessarily includes all that is grown in the Districts of Clarence, Deloraine, Evandale, Franklin, George Town, Glamorgan, Kingborough, Horton, Selby, Longford, New Norfolk, Port Sorell, Richmond, Spring Bay, Sorell, and Westbury,—none of the produce of which Districts reaches the Main Road so as to affect these Returns. The quantity grown in the Districts of Bothwell, Brighton, Campbell Town, Fingal, Green Fonds, Glenorchy, Hamilton, Oatlands, and Ross, from which Districts the traffic on the Main Road is supplied, is given as follows:—

Wheat, barley, oats, pease, beans, tares, and grass seed	7747 tons.
Potatoes	<b>3</b> 355 "
Hay	10,710 ,,
All other produce except fruit	4273 ,,
Making a total of	26,085 tons.

Allowance being made for seed and consumption, it will be seen that two-thirds of this quantity would be the utmost that would be available for transmission to market in 1867–1868, and would be in excess of the quantity that would be available for market in the present year.

I have the honor to be, Sir,

Your very obedient Servant,

JOSH. PENNY.

The Hon, the Colonial Secretary.
