An example of a technology solution to transport sharing.

ON-DEMAND

On-Demand Shared Transport

One technology platform to efficiently
service more passengers.

PRODUCT DETAILER:
ON-DEMAND

Optimise transport for real-time demand.

Passenger demand changes. It's never fixed. So why create more fixed route schedules?

On-demand shared transport uses a dynamically routed system that constantly redesigns itself based on real-time passenger demand.

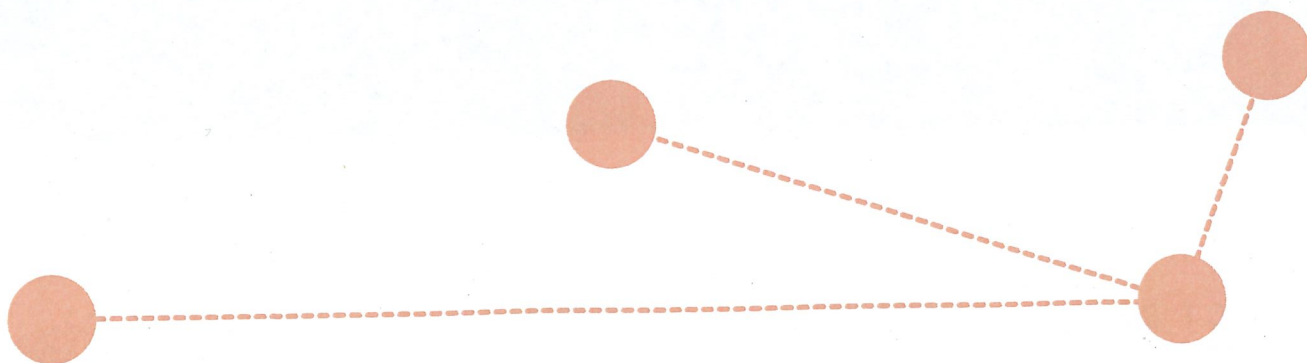

This means, less wasted time driving from stop to stop and more time servicing passengers where they are.

Overall, you get better patronage and improved utilisation of your fleet.

On-Demand: Connecting the landscape.

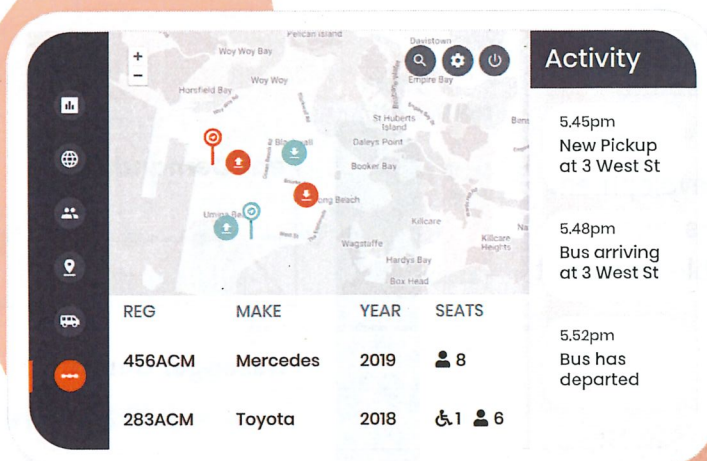

At its core, on-demand shared transport is designed to;

- Allow commuters to access transport around their schedule
- Increase shared trips
- Be a sustainable form of transport
- Replace inefficient fixed route transit services
- Improve passenger catchment and integrate with the broader transport network
- Reduce reliance on single-occupancy vehicle use

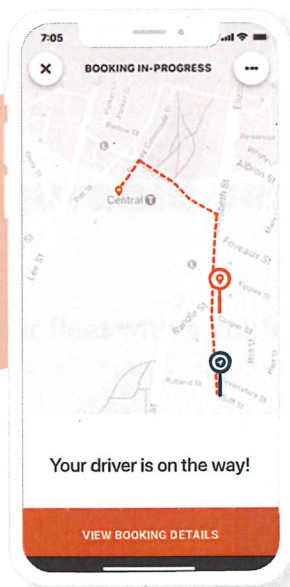

Liftango Bus: Improving public transport.

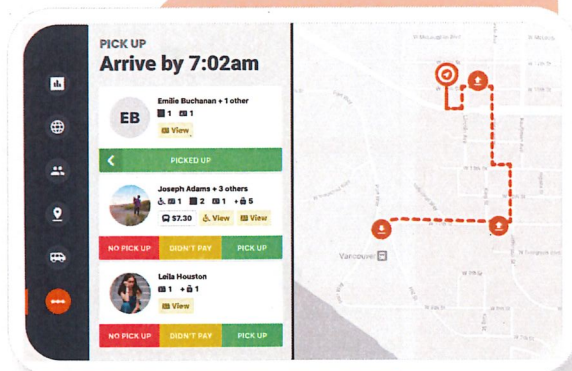

Cost effective way to connect passengers to public transport

Better coverage vs a fixed route service

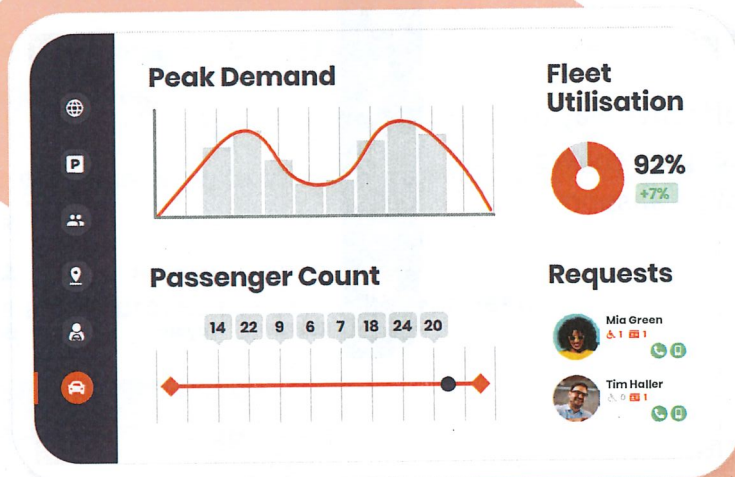

Reduce parking pressure at mass transit hubs

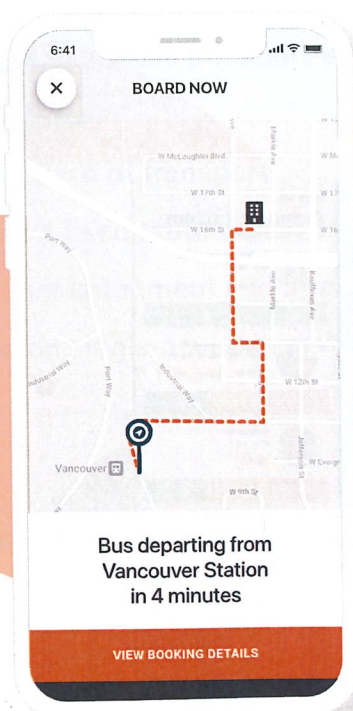

Liftango Shuttle: On-Demand Corporate Shuttles.

Satisfy development conditions with sustainable transport

Reduces parking pressure at high density economic hubs

Decrease commute & fleet operating costs

Connect the last-mile and integrate with mass transit services.

Liftango Fleet: Increasing fleet utilisation.

Remove inefficient fixed-route feeder services

Reduce manual administrative resources

Fleet Utilisation

Requests

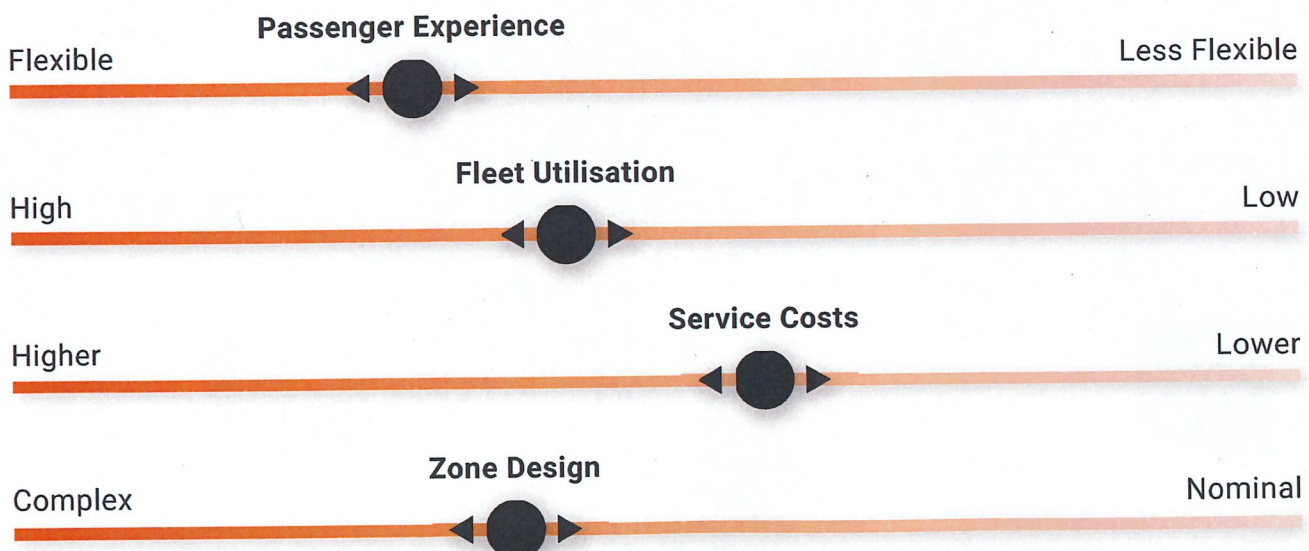

Improve mass-transit onboarding & patronage

Dramatically reduce fleet costs

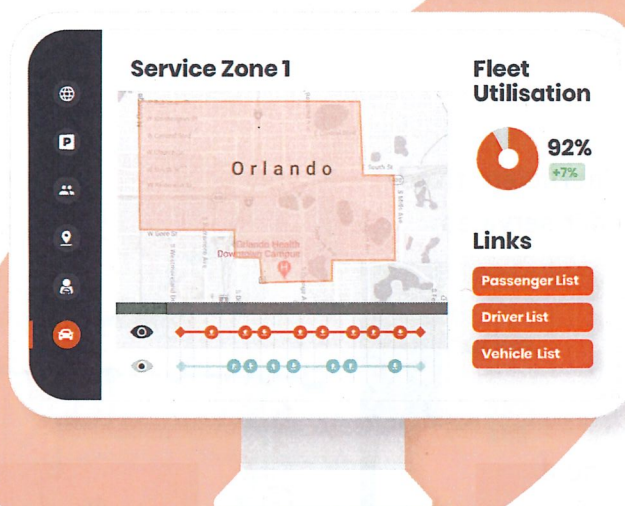

Configurable service parameters.

Enhance your fleet with a configurable technology platform that adapts to changing demand.

360 degree operational visibility.

We understand you need full control of your fleet to make sound operational decisions. Our operations platform is designed to give you that power. See important service metrics in real-time, make passenger bookings and coordinate vehicle shift times and drivers.

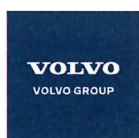

Where to start?

Our on-demand platform and suite of services is here to help you discover, plan and launch a tailored solution specific to your needs. From simulating your new service to supporting the delivery and marketing efforts, our team is here to guide you on the journey.

You're in good company.

Join the many global organisations leveraging the power of shared mobility.

Our process:

- 1** **Engage** us for a free consultation
- 2** We'll **tailor** a solution and business plan to meet your needs
- 3** You'll **launch** a successful on-demand shared transport service with our **support**

We co-create localised solutions that get results.

- Increase the coverage area of your service
- Improve patronage of mass transit
- Reduce fleet operations costs
- Equitable transport access
- Reduce the reliance on single-occupancy vehicle use.

Got questions?

We're here to listen.

Speak to us today about how we can co-create an on-demand shared transport solution together.
