

Emissions Reduction Targets and Timelines

Ms BADGER question to MINISTER for ENVIRONMENT

On behalf of my constituent Peter from Dodges Ferry, who asks: the objectives of the *Climate Change Act* include setting a target for greenhouse gas emission reduction. While your government has aimed for net zero, you have no actual plan to cut emissions. You are using our state's renewable energy generation and unlogged forests to offset continuing emissions. This is not the real climate action that Tasmanians have consistently demanded or that you have previously promised. This is greenwashing.

Can you detail your actual targets and timeline for emissions reduction and across which sectors these will take place? Or instead of real climate action, are you just committed to climate denial through delays?
