- (1) Notes that Goldwind Australia has been named as a finalist for the 2021 Clean Energy Council Awards in the Innovation category, for its cutting-edge eagle detection and collision avoidance technology at the Cattle Hill Wind Farm.
- (2) Acknowledges that the successful implementation of the IdentiFlight system at the Cattle Hill Wind Farm in Tasmania demonstrated that substantial risk reduction to eagles is possible for large-scale wind farm locations where endangered eagles are at high risk of collision with turbines.
- (3) Further notes that, this use of IdentiFlight at Cattle Hill Wind Farm is the first of its kind in Australia and the technology uses high precision optical sensors and artificial intelligence to detect endangered Wedge-tailed Eagles and shut down specific wind turbines to avoid collision.
- (4) Further notes that Goldwind and IdentiFlight modelled and optimised the system over 18 months to determine the layout for the 16 IdentiFlight units by progressively analysing eagle behaviours and refining the control logic and setting to eliminate the risk.
- (5) Further notes that the 2021 Clean Energy Council Awards will be presented on 13 July 2021 at the 2021 Australian Clean Energy Summit. (23 June 2021)
