Submission to Legislative Council Sessional Committee Government Administration A -Sub-Committee - Fin Fish Farming in Tasmania Inquiry

Dear Mr Wright

To me it appears that new farms , stocking levels and reporting are still being assessed using the same approvals system that allowed the disaster of Macquarie harbour in 2016 (when I actually briefly worked for Tassal during that summer). Whilst clearly an important industry in Tasmania, I believe reform is required to ensure

collection of thorough baseline data prior to inception of new projects,

Just consideration for social and lifestyle impacts to Tasmanian residents

and independent monitoring and oversight of stocking levels, dissolved oxygen, benthic data, fish health etc

I endorse the following recommendations by the Tasmanian Conservation Trust 1. Complete independent water quality and environmental studies, before any environmental licences are issued (not an “adaptive management” approach)., 2. Environmental licences must set a hard cap on biomass and dissolved nitrogen and other pollutants emitted into our waterways from pens, hatcheries and other infrastructure., 3. Require all licences and licence amendments (marine and land based) to be referred to the EPA board so that the community can have a say., 4. Commission an independent review of the Marine Farming Planning Review Panel, focusing on its membership, governance and ties to industry., 5. Improve transparency and enforcement by prosecuting fish escapes, fish kills, marine debris and seal and cetacean interactions., 6. Mandate public reporting for disease outbreaks and other bio-security incidents., 7. Amend the Marine Farming Planning Act to require valuation and protection of social, recreational and visual amenity; and consideration of noise impacts on surrounding residents.

Thank you for reviewing my submission

Yours Sincerely
Mark Sconlan
