Submission to Legislative Council Sessional Committee Government Administration A -Sub-Committee - Fin Fish Farming in Tasmania Inquiry

Dear Mr Wright

Industrial fish farming affects everybody in that they cannot exist without massive antibiotic inputs to their already unnatural food, and their unnaturally concentrated excrement gathers in the one area.

Our environment is already overloaded with dumped over-prescribed antibiotics and so are our bodies, to the point that most just don't work anymore. Then there is the problem of the massive concentrations of hormones invading our food chains via soy products, which are causing so many issues with our human population.

Why are you feeding fish foodstuffs and chemical poisons which they would never ever find or eat in the natural world? Fish are also not meant to be kept in overcrowded pens in the one spot living and dying in their own excrement.

Thank you for reviewing my submission

Yours Sincerely  
Russell Langfield
